1 The French language

The file `frenchb.dtx`¹, defines all the language definition macros for the French language.

Customisation for the French language is achieved following the book “Lexique des règles typographiques en usage à l’Imprimerie Nationale” troisième édition (1994), ISBN-2-11-081075-0.

First version released: 1.1 (May 1996) as part of Babel-3.6beta. Version 2.0a was released in February 2007 and version 3.0a in February 2014.

`babel-french` has been improved using helpful suggestions from many people, mainly from Jacques André, Michel Bovani, Thierry Bouche, Vincent Jalby, Denis Bitouzé, Ulrike Fisher and Marcel Krüger. Thanks to all of them!

LaTeX-2.09 is no longer supported. Version 3.0 has been designed to be used only with LaTeX2e and Plain formats based on TeX, pdfTeX, LuaTeX or XeTeX engines.

Changes between version 3.0 and v3.5s are listed in subsection [1.4 p. 11](#).

An extensive documentation in French (file `frenchb-doc.pdf`) is now included in `babel-french`.

1.1 Basic interface

In a multilingual document, some typographic rules are language dependent, i.e. spaces before ‘high punctuation’ (: ; ! ?) in French, others modify the general layout (i.e. layout of lists, footnotes, indentation of first paragraphs of sections) and should apply to the whole document.

The French language can be loaded with Babel by a command like:

```
\usepackage[german,spanish,french,british]{babel}
```

²

A variant `adian` of `french` is provided; it is originally identical to `french` but can be customised independently in terms of patterns, punctuation spacing, captions, etc. Both variants can be used together inside the same document.

`babel-french` takes account of Babel’s *main language* defined as the *last* option at Babel’s loading. When French is not Babel’s main language, `babel-french` does not alter the general layout of the document (even in parts where French is the current language): the layout of lists, footnotes, indentation of first paragraphs of sections are not customised by `babel-french`.

When French is loaded as the last option of Babel, `babel-french` makes the following changes to the global layout, *both in French and in all other languages*³:

1. the first paragraph of each section is indented (LaTeX only);
2. the default items in itemize environment are set to ‘—’ instead of ‘•’, and all vertical spacing and glue is deleted; it is possible to change ‘—’ to something else (‘–’ for instance) using `\frenchsetup{}` (see section [1.2 p. 4](#));
3. vertical spacing in general LaTeX lists is shortened;
4. footnotes are displayed “à la française”.
5. the separator following the table or figure number in captions is printed as ‘ – ’ instead of ‘: ’; for changing this see [1.2.3 p. 9](#).

¹The file described in this section has version number v3.5s and was last revised on 2024-02-29.

²Always use `french` as option name for the French language, former aliases `frenchb` or `francais` are depreciated; expect them to be removed sooner or later!

³For each item, hooks are provided to reset standard LaTeX settings or to emulate the behavior of former versions of `babel-french` (see command `\frenchsetup{}`, section [1.2 p. 4](#)).

Regarding local typography, the command `\selectlanguage{french}` switches to the French language⁴, with the following effects:

1. French hyphenation patterns are made active;
2. ‘high punctuation’ characters (: ; ! ?) automatically add correct spacing ⁵ in French; this is achieved using callbacks in Lua(La)TeX or ‘XeTeXinterchar’ mechanism in Xe(La)TeX; with TeX’82 and pdf(La)TeX these four characters are made active in the whole document;
3. `\today` prints the date in French;
4. the caption names are translated into French (LaTeX only). For customisation of caption names see section [1.2.2 p. 9](#).
5. the space after `\dots` is removed in French.

Some commands are provided by `babel-french` to make typesetting easier:

1. French quotation marks can be entered using the command `\frquote{}`: `\frquote{some text}` will output « some text ». Former commands `\og` and `\fg` are kept for backward compatibility: `\og some text\fg{}` is an alternative to `\frquote{some text}`.

If French quote characters are available on your keyboard, you can use them, to get proper spacing in LaTeX2e see option `og=<`, `fg=>` p. [7](#).

For quotations spreading over more than one paragraph, `\frquote` will add at the beginning of every paragraph of the quotation either an opening French guillemet («), or a closing one (») or nothing depending on option `EveryParGuill=open` or `=close` or `=none`, see p. [8](#). Command `\NoEveryParQuote` is provided to locally suppress unwanted guillemets (typically when lists are embedded in `\frquote{}`), it is meant to be used inside an environment or a group.

`\frquote` is recommended to enter embedded quotations “à la française”, several variants are provided through options.

- with all engines: the inner quotation is surrounded by double quotes (“texte”) unless option `InnerGuillSingle=true`, then a) the inner quotation is printed as `< texte >` and b) if the inner quotation spreads over more than one paragraph, every paragraph included in the inner quotation starts with a `<` or a `>` or nothing, depending on option `EveryParGuill=open` (default) or `=close` or `=none`.
- with LaTeX based engines, it is possible to add a French opening or closing guillemet (« or ») at the beginning of every line of the inner quotation using option `EveryLineGuill=open` or `=close`; note that with any of these options, the inner quotation is surrounded by French guillemets (« and ») regardless option `InnerGuillSingle`; the default is `EveryLineGuill=none` so that `\frquote{}` behaves as with non-LaTeX engines.

A starred variant `\frquote*` is meant for inner quotations which end together with the outer one: using `\frquote*` for the inner quotation will print only one closing quote character (the outer one) as recommended by the French ‘Imprimerie Nationale’.

⁴`\selectlanguage{francais}` and `\selectlanguage{frenchb}` are no longer supported.

⁵Well, the automatic insertion may add unwanted spaces in some cases, for correction see `AutoSpacePunctuation` option and `\NoAutoSpacing` command p. [7](#).

2. `\frenchdate{<year>}{<month>}{<day>}` helps typesetting dates in French: `\frenchdate{2001}{01}{01}` will print 1^{er} janvier 2001 in a box without any linebreak.
 3. A command `\up` is provided to typeset superscripts like `M\up{me}` (abbreviation for “Madame”), `1\up{er}` (for “premier”). Other commands are also provided for ordinals: `\ier`, `\iere`, `\iers`, `\ieres`, `\ieme`, `\iemes` (`3\iemes` prints 3^{es}). All these commands take advantage of real superscript letters when they are available in the current font.
 4. Command `\bname{}` (boxed name) is provided to typeset family names: its argument will not be hyphenated except on explicit hyphens. `\bsc{}` (boxed small caps) is a variant that prints its argument in small capitals, it is meant for bibliographies, signatures, etc. Usage: `Albert~\bsc{Camus}`.
 5. Commands `\primo`, `\secundo`, `\tertio` and `\quarto` print 1^o, 2^o, 3^o, 4^o. `\FrenchEnumerate{6}` prints 6^o.
 6. Abbreviations for “Numéro(s)” and “numéro(s)” (N^o N^{os} n^o and n^{os}) are obtained via the commands `\No`, `\Nos`, `\no`, `\nos`.
 7. Two commands are provided to typeset the symbol for “degré”: `\degre` prints the raw character and `\degres` should be used to typeset temperatures (e.g., “20~\degres C” with a non-breaking space), or for alcohols’ strengths (e.g., “45\degres” with *no* space in French) or for angles in math mode.
 8. In math mode the comma has to be surrounded with braces to avoid a spurious space being inserted after it, in decimal numbers for instance (see the `\TeXbook` p. 134). The command `\DecimalMathComma` makes the comma behave as an ordinary character *when the current language is French* (no space added); as a counterpart, if `\DecimalMathComma` is active, an explicit thin space has to be added in lists and intervals: `$(x,\,y)$`, `$[0,\,1]$`. `\StandardMathComma` switches back to the standard behaviour of the comma in French.
- The `icomma` package is an alternative workaround.
9. A command `\nombre` was provided in 1.x versions to easily format numbers in slices of three digits separated either by a comma in English or with a space in French; `\nombre` is now mapped to `\numprint` from `numprint.sty`, which should be loaded *after* Babel, see `numprint.pdf` for more information.
 10. `babel-french` has been designed to take advantage of the `xspace` package if present: adding `\usepackage{xspace}` in the preamble will force macros like `\fg`, `\ier`, `\ieme`, `\dots`, ..., to respect the spaces you type after them, for instance typing ‘1\ier juin’ will print ‘1^{er} juin’ (no need for a forced space after 1\ier).

1.2 Customisation

Customisation of `babel-french` relies on command `\frenchsetup{}` (formerly called `\frenchbsetup{}`), the latter name will be kept for ever to ensure backwards compatibility), options are entered using the keyval syntax. The command `\frenchsetup{}` is to appear in the preamble only (after loading Babel).

1.2.1 \frenchsetup{options}

\frenchbsetup{} and \frenchsetup{} are synonymous; the latter should be preferred as the language name for French in Babel is no longer frenchb but french. \frenchsetup{ShowOptions} prints all available options to the .log file, it is just meant as a remainder of the list of offered options. As usual with keyval syntax, boolean options (as ShowOptions) can be entered as ShowOptions=true or just ShowOptions, the =true part can be omitted.

The other options are listed below. Their default value is shown between braces, sometimes followed by a '*'. The '*' means that the default shown applies when babel-french is loaded as the *last* option of Babel —Babel's *main language*—, and is toggled otherwise.

StandardLayout=true (false*) forces babel-french not to interfere with the layout: no action on any kind of lists, first paragraphs of sections are not indented (as in English), no action on footnotes; it is useless unless French is the main language. This option can be used to avoid conflicts with classes or packages which customise lists or footnotes.

GlobalLayoutFrench=false (true*) can only be used when French is the main language; setting it to false will emulate what prior versions of babel-french (pre-2.2) did: lists, and first paragraphs of sections will be displayed the standard way in other languages than French, and “à la française” in French (changing the layout inside a document is a bad practice imho). Note that the layout of footnotes is language independent anyway (see below **FrenchFootnotes** and **AutoSpaceFootnotes**).

IndentFirst=false (true*); set this option to false if you do not want babel-french to force indentation of the first paragraph of sections. When French is the main language, this option applies to all languages.

PartNameFull=false (true); when true, babel-french numbers the title of \part{} commands as “Première partie”, “Deuxième partie” and so on. With some classes which change the \part{} command (AMS classes do so), you could get “Première partie 1”, “Deuxième partie 2” in the toc; when this occurs, this option should be set to false, part titles will then be printed as “Partie I”, “Partie II”.

ListItemsAsPar=true (false) setting this option to true is recommended: list items will be displayed as paragraphs with indented labels (in the “Imprimerie Nationale” way) instead of having labels hanging into the left margin. How these two layouts differ is shown below:

Text starting at 'parindent'
<= Leftmargin
— first item running on two
lines or more...
— first second level item
on two lines...
— next one...
— second item...

Default French layout

Text starting at 'parindent'
<= Leftmargin
— first item running on two
lines or more...
— first second level item
on two lines...
— next one...
— second item...

With **ListItemsAsPar=true**

`StandardListSpacing=true (false*)`⁶; babel-french customises the vertical spaces in the list environment, this affects all lists, including itemize, enumerate, description, but also abstract, quote, quotation, verse, etc. which are based on list. Setting this option to `true` reverts to the standard settings of the list environment as defined by the document class.

`StandardItemizeEnv=true (false*)`; babel-french redefines the itemize environment to suppress any vertical space between items of itemize lists in French and customises left margins. Setting this option to `true` reverts to the standard definition of itemize.

`StandardEnumerateEnv=true (false*)`; babel-french redefines enumerate and description environments to make left margins match those of the French version of itemize lists. Setting this option to `true` reverts to the standard definition of enumerate and description.

`StandardItemLabels=true (false*)` when set to `true` this option prevents babel-french from changing the labels in itemize lists in French.

`ItemLabels=\textbullet, \textendash, \ding{43}, (\textemdash*)`;
when `StandardItemLabels=false` (the default), this option enables to choose the label used in French itemize lists for all levels. The next four options do the same but each one for a specific level only. Note that `\ding{43}` requires loading the pifont package.

`ItemLabeli=\textbullet, \textendash, \ding{43} (\textemdash*)`

`ItemLabelii=\textbullet, \textendash, \ding{43} (\textemdash*)`

`ItemLabeliii=\textbullet, \textendash, \ding{43} (\textemdash*)`

`ItemLabeliv=\textbullet, \textendash, \ding{43} (\textemdash*)`

`StandardLists=true (false*)` forbids babel-french to customise any kind of list. Try the option `StandardLists` in case of conflicts with classes or packages that customise lists too. This option is just a shorthand setting all four options `StandardListSpacing=true`, `StandardItemizeEnv=true`, `StandardEnumerateEnv=true` and `StandardItemLabels=true`.

`ListOldLayout=true (false)`; starting with version 2.6a, the layout of lists has changed regarding leftmargins' sizes and default itemize label ('—' instead of '–' up to 2.5k). This option, provided for backward compatibility, displays lists as they were up to version 2.5k.

`FrenchFootnotes=false (true*)` reverts to the standard layout of footnotes. By default babel-french typesets leading numbers as '1. ' instead of '1', but has no effect on footnotes numbered with symbols (as in the `\thanks` command). Two commands `\StandardFootnotes` and `\FrenchFootnotes` are available to change the layout of footnotes locally; `\StandardFootnotes` can help when some footnotes are numbered with letters (inside minipages for instance).

⁶This option should be used instead of former option `ReduceListSpacing` (kept for backward compatibility) which could be misleading: with some classes (smfart, smfbook f.i.) you had to set `ReduceListSpacing=false` to revert to the class settings which actually reduce list's spacings even more than babel-french! `StandardListSpacing=true` replaces `ReduceListSpacing=false`.

`AutoSpaceFootnotes=false` (**true***) ; by default `babel-french` adds a thin space in the running text before the number or symbol calling the footnote. Making this option **false** reverts to the standard setting (no space added).

`AutoSpacePunctuation=false` (**true**) ; in French, the user *should* input a space before the four characters ‘; ; ! ?’ but as many people forget about it (even among native French writers!), the default behaviour of `babel-french` is to automatically typeset non-breaking spaces the width of which is either `\FBthinspace` (defaults to a thin space) before ‘;’ ‘!’ ‘?’ or `\FBcolonspace` (defaults to `\space`) before ‘:’; the defaults follow the French ‘Imprimerie Nationale’s recommendations. This is convenient in most cases but can lead to addition of spurious spaces in URLs, in MS-DOS paths or in timetables (10:55)—this no longer occurs with `LuaTeX`—, except if they are typed in `\texttt` or `verbatim` mode. When the current font is a monospaced (typewriter) font, no spurious space is added in that case ⁷, so the default behaviour of `babel-french` in that area should be fine in most circumstances.

Choosing `AutoSpacePunctuation=false` will ensure that a proper space is added before ‘; ; ! ?’ *if and only if* a (normal) space has been typed in. This option gives full control on space insertion before ‘; ; ! ?’. Those who are unsure about their typing in this area should stick to the default option and use the provided `\NoAutoSpacing` command inside a group in case an unwanted space is added by `babel-french` (i.e. `\{ \NoAutoSpacing http://mysite}` ⁸ or `\{ \NoAutoSpacing ??? }` (needed for `pdfTeX` only).

`ThinColonSpace=true` (**false**) changes the non-breaking space added before the colon ‘:’ to a thin space, so that the same amount of space is added before any of the four ‘high punctuation’ characters. The default setting is supported by the French ‘Imprimerie Nationale’.

`OriginalTypewriter=true` (**false**) prevents any customisation of `\ttfamily` and `\texttt{}` in French. This option should only be used to ensure backward compatibility. The current default behaviour is to switch off any addition of space before high punctuation with typewriter fonts (e.g. `verbatim`).

`UnicodeNoBreakSpaces=true` (**false**) ; (experimental) this option should be set to **true** *only while converting `LuaTeX` files* to `HTML`. It ensures that non-breaking spaces added by `babel-french` are inserted in the `PDF` file as U+A0 or U+202F (thin) instead of penalties and glues. Note that `lwarpt` (v. 0.37 and up) is fully compatible with `babel-french` for translating `PDFTeX` or `XeLaTeX` files to `HTML`.

`og=<>, fg=<>` ; when guillemets characters are available on the keyboard (through a compose key for instance), it is nice to use them instead of typing `\frquote{}`. This option tells `babel-french` which characters are opening and closing French guillemets (they depend on the input encoding), then you can type either `<< guillemets >>` or `<<guillemets>>` ⁹ (with or without spaces) to get properly typeset French quotes. This option works with `LuaTeX`, `XeLaTeX` and with `pdfLaTeX` (default encoding: `utf8`); with `pdflatex` other 8-bits encodings (`latin1`,

⁷Unless option `OriginalTypewriter` is set, `\ttfamily` is redefined in French to switch off space tuning, see below.

⁸Actually, this is needed only with the `XeTeX` and `pdFTeX` engines. `LuaTeX` no longer inserts any space in strings like `http://mysite`, `C:\Foo`, 10:55...

⁹Or even `<<guillemets~>>`, but *only* with `LuaTeX`.

latin9, ansinew, applemac,...) are also supported when properly declared with `inputenc`.

`INGuillSpace=true (false)` resets the dimensions of spaces after opening French quotes and before closing French quotes to the French ‘Imprimerie Nationale’ standards (inter-word space). `babel-french`’s default setting produces slightly narrower spaces with less stretchability.

`EveryParGuill=open, close, none (open)`; sets whether an opening quote («) or a closing one (») or nothing should be printed by `\frquote{}` at the beginning of every paragraph included in a level 1 (outer) quotation. This option is also considered for level 2 (inner) quotations to decide between < and > when `InnerGuillSingle=true` (see below).

`EveryLineGuill=open, close, none (none)`; with LuaTeX based engines *only*, it is possible to set this option to `open` [resp. `close`]; this ensures that a ‘‘’ [resp. ‘’’] followed by a proper space will be inserted at the beginning of every line of embedded (inner) quotations spreading over more than one line (provided that both outer and inner quotations are entered with `\frquote{}`). When `EveryLineGuill=open` or =`close` the inner quotation is always surrounded by « and », the next option is ineffective.

`InnerGuillSingle=true (false)`; if `InnerGuillSingle=false` (default), inner quotations entered with `\frquote{}` start with ‘`’ and end with ‘’’. If `InnerGuillSingle=true`, < and > are used instead of British double quotes; moreover if option `EveryParGuill=open` (or `close`) is set, a < (or >) is added at the beginning of every paragraph included in the inner quotation.

`ThinSpaceInFrenchNumbers=true (false)`; if `numprint` has been loaded with the `autolanguage` option, while typesetting numbers with the `\numprint{}` command, `\npthousandsep` is defined as a non-breaking space (~)¹⁰ in French; when set to true, this option redefines `\npthousandsep` as a thin space (\,).

`SmallCapsFigTabCaptions=false (true*)`; when set to `false`, `\figurename` and `\tablename` will be printed in French captions as “Figure” and “Table” instead of being printed in small caps (the default). The same result can be achieved by defining `\FBfigtabshape` as `\relax` before loading `babel-french` (in a document class f.i.).

`CustomiseFigTabCaptions=false (true*)`; when `false` the default separator (colon) is used instead of `\CaptionSeparator`. Anyway, `babel-french` tries hard to insert a proper space before it in French and warns if it fails to do so.

`OldFigTabCaptions=true (false)` is to be used *only* when figures’ and tables’ captions must be typeset as with pre 3.0 versions of `babel-french` (with `\CaptionSeparator` in French and colon otherwise). Intended for standard LaTeX classes only.

`FrenchSuperscripts=false (true)`; then `\up=\textsuperscript`. (option added in version 2.1). Should only be made `false` to recompile documents written before 2008 without changes: by default `\up` now relies on `\fup` designed to produce better looking superscripts.

¹⁰Actually without stretch nor shrink.

`LowercaseSuperscripts=false (true)`; by default `babel-french` inhibits the uppercaseing of superscripts (for instance when they are moved to page headers). Making this option `false` will disable this behaviour (not recommended).

`SuppressWarning=true (false)`; can be turned to `true` if you are bored with `babel-french`'s warnings; use this option as *first* option of `\frenchsetup{}` to cancel warnings launched by other options.

Options' order – Please remember that options are read in the order they appear in the `\frenchsetup{}` command. Someone wishing that `babel-french` leaves the layout of lists and footnotes untouched but caring for indentation of first paragraph of sections should choose

`\frenchsetup{StandardLayout,IndentFirst}` to get the expected layout. The reverse order `\frenchsetup{IndentFirst,StandardLayout}` would lead to option `IndentFirst` being overwritten by `StandardLayout`.

1.2.2 Caption names

All caption names can easily be customised in French using the simplified syntax introduced by Babel 3.9, for instance `\def\frenchproofname{Preuve}` or `\def\acadianproofname{Preuve}` for the acadian dialect. The older syntax `\addto\captionsfrench{\def\proofname{Preuve}}` still works. Keep in mind that *only* french can be used to redefine captions, even if Babel's option was entered as `frenchb` or `francais`.

1.2.3 Figure and table captions

In French, captions in figures and tables should never be printed as 'Figure 1: ' which is the default in standard LaTeX2e classes (a space should *always* precede a colon in French), anyway 'Figure 1 –' is preferred.

When French is the main language, the default behaviour of `babel-french` is to change the separator (colon) used in figures' and tables' captions *for all languages* to `\CaptionSeparator` which defaults to ' – ' and can be redefined in the preamble with `\renewcommand*{\CaptionSeparator}{...}`. This works for the standard LaTeX2e classes, for the memoir koma-script and beamer classes. In case this procedure fails a warning is issued.

When French is not the main language, the colon is preserved for all languages including French but `babel-french` tries hard to insert a proper space before it and warns if it fails to do so.

Three options are provided to customise figure and table captions:

- `CustomiseFigTabCaptions` is set to `true` when French is the main language (hence separator = ' – ') and to `false` otherwise (hence separator = ': ' with a proper space before the colon in French if possible); toggle this option if needed;
- the second option, `OldFigTabCaptions`, can be set to `true` to print figures' and tables' captions as they were with versions pre 3.0 of `babel-french` (using `\CaptionSeparator` in French and colon in other languages); this option only makes sense with the standard LaTeX classes `article`, `report` and `book`;

- the last option, `SmallCapsFigTabCaptions`, can be set to `false` to typeset `\figurename` and `\tablename` in French as “Figure” and “Table” rather than in small caps (the default).

1.3 Hyphenation checks

Once you have built your format, a good precaution would be to perform some basic tests about hyphenation in French. For LaTeX2e I suggest this:

- run pdfLaTeX on the following file:

```
%% Test file for French hyphenation.
\documentclass[french]{article}
\usepackage[utf8]{inputenc} % utf8, what else?
\usepackage[T1]{fontenc}   % mandatory for French
\usepackage{lmodern}      % or erewhon, palatino...
\usepackage{babel}
\begin{document}
\showhyphens{signal container \'ev\'ement alg\`ebre}
\showhyphens{signal container \'evenement alg\`ebre}
\end{document}
```

- check the hyphenations proposed by T_EX in your log-file; in French you should get with both 7-bit and 8-bit encodings
si-gnal contai-ner évé-ne-ment al-gèbre.
 Do not care about how accented characters are displayed in the log-file, what matters is the position of the ‘-’ hyphen signs *only*.

If they are all correct, your installation (probably) works fine, if one (or more) is (are) wrong, ask a local wizard to see what’s going wrong and perform the test again (or e-mail me about what happens).

Frequent mismatches:

- you get `sig-nal con-tainer`, this probably means that the hyphenation patterns you are using are for US-English, not for French;
- you get no hyphen at all in `évé-ne-ment`, this probably means that you are using CM fonts and the macro `\accent` to produce accented characters. Using 8-bits fonts with built-in accented characters avoids this kind of mismatch.

1.4 Changes

What's new in version 3.5?

Version 3.5a offers a new option `ListItemsAsPar`. The default layout of lists is unchanged (for backward compatibility), but users should try this new option which ensures a layout of lists closer to French typographic standards: see f.i. how lists are typeset in the book “Lexique des règles typographiques en usage à l’Imprimerie Nationale”.

Version 3.5b fixes a bug due to wrong `\everypar`'s management in `\frquote{}`; it showed up when `\frquote{}` immediately followed a sectionning command.

Starting with version 3.5d, a new option `StandardListSpacing` has been added to supersede `ReduceListSpacing`.

A new command `\NoEveryParQuote` has been added in version 3.5e: it is meant to be used inside a group or environment to suppress unwanted guillemets (typically when lists are embedded in `\frquote{}`).

Version 3.5g fixes a long standing bug affecting LuaTeX: legacy kerning was disabled for Type1 fonts since v3.1g (2015).

Version 3.5j also fixes a long standing bug affecting koma-script, memoir et beamer classes: redefinitions of the caption separator (commands `\captionformat`, `\captiondelim`, etc.) are now taken into account properly.

Version 3.5k is a cleanup release:

- the translations in French of `\figurename` and `\tablename` no longer hold font changing commands (switch to small caps), the font switch has been moved to `\fnum@figure` and `\fnum@table` as suggested by Axel Sommerfeldt.
- Package `caption` can now be loaded whether before or after `babel`, indifferently.
- `\pdfstringdefDisableCommands` is no longer used: as suggested by the LaTeX3 team, all commands requiring special care in `hyperref`'s bookmarks are now defined using `\textorpdfstring{}{}`.

Version 3.5n introduces a new command `\bname{}` (an alternative to `\bsc{}`).

Version 3.5q corrects a bug in lists layout: `\listparindent` (formely `0pt`) is defined as `\parindent` and if `\parskip > 0pt`, `\parsep` is now defined as `\parskip`. This ensures that paragraphs included in lists are now visible. The former behaviour can be recovered by adding `\parskip=0pt, \parindent=0pt` *inside* the list environment. Version 3.5r is compatible with `ucharclasses` which is now loaded by `fontsetup` with the XeTeX engine. The `frenchb.ins` file is no longer needed to extract the `.ldf` files from `frenchb.dtx` (see `README.md`).

What's new in version 3.4?

Version 3.4a adds a new command `\frenchdate` (see p. 4) and slightly changes number formatting: `\FBthousandsep` is now a *kern* instead of a rubber length. `\renewcommand*{\FBthousandsep}{~}` will switch back to the former (wrong) behaviour.

Both options `french` and `acadian` can now be used simultaneously in a document; currently `french` and `acadian` are identical, it is up to the user to customise `acadian` in terms of hyphenation patterns, captionnames, date format or high punctuation and quotes spacing if he/she needs a variant for French.

A new command `\FBsetspace` has been added for easy customising of spacing before high punctuation and inside quotes independently for french and acadian, see p. 18.

Version 3.4 requires eTeX and LuaTeX 1.0.4 or newer.

What's new in version 3.3?

In version 3.3d the automatic insertion of non-breaking spaces before the colon character has been improved *with engine LuaTeX only*: a spurious space is no longer inserted in strings like `http://mysite`, `C:\Program Files` or `10:55`. Unfortunately, my attempts to do the same with XeTeX or pdfTeX were unsuccessful.

A few internal changes have been made in version 3.3c to improve the conversion into HTML of non-breaking spaces added by `babel-french`. Usage of `l warp` (v.0.37 and up) is recommended for HTML output, it works fine on files compiled with XeLaTeX or pdfLaTeX formats. A new experimental option `UnicodeNoBreakSpaces` has been added for LuaLaTeX in version 3.3c, see p. 7.

According to current Babel's standards, every dialect should have its own `.ldf` file; starting with version 3.3b, the main support for French is in `french.ldf`, portmanteau files `frenchb.ldf`, `francais.ldf`, `acadian.ldf` and `canadien.ldf` have been added. Recommended options are `french` or `acadian`, all other are deprecated. BTW, options `french` and `acadian` are currently strictly identical.

Release 3.3a is compatible with LuaTeX v. 0.95 (TL2016) and up. Former skips `\FBcolonskip`, `\FBthinspace` and `\FBguillskip` controlling punctuation spacings in LuaTeX have been removed; all three engines now rely on the same commands `\FBcolonspace`, `\FBthinspace` and `\FBguillspace`.

An alias `\frenchsetup{}` for `\frenchbsetup{}` has been added in version 3.3a, it might appear more relevant in the future as the language name `frenchb` should vanish.

Further customisation of the `\part{}` command is provided via three new commands `\frenchpartfirst`, `\frenchpartsecond` and `\frenchpartnameord`.

What's new in version 3.2?

Version 3.2g changes the default behaviour of `\frquote{}` with LuaTeX based engines, the output is now the same with all engines; to recover the former behaviour, add option `EveryLineGuill=open`.

The handling of footnotes has been redesigned for the `beamer`, `memoir` and `koma-script` classes. The layout of footnotes “à la française” should be unchanged but footnotes' customisations offered by these classes (i.e. font or color changes) are now available even when option `FrenchFootnotes` is `true`.

A long standing bug regarding the `xspace` package has been fixed: `\xspace` has been moved up from the internal command `\FB@fg` to `\fg`; `\frquote{}` now works properly when the `xspace` package is loaded.

Version 3.2b is the first one designed to work with LuaTeX v. 0.95 as included in TeXLive 2016 (LuaTeX's new glue node structure is not compatible with previous versions).

Warning to Lua(La)TeX users: starting with version 3.2b the lua code included in `frenchb.lua` will *not work* on older installations (TL2015 f.i.), so `babel-french` reverts to active characters while handling high punctuation with LuaTeX engines older than 0.95! The best way to go is to upgrade to TL2016 or equivalent asap.

Xe(La)TeX and pdf(La)TeX users can safely use babel-french v. 3.2b and later on older installations too.

The internals of commands \NoAutoSpacing, \ttfamilyFB, \rmfamilyFB and \sfamilyFB have been completely redesigned in version 3.2c, they behave now consistently with all engines.

What's new in version 3.1?

New command \frquote{} meant to enter French quotations, especially long ones (spreading over several paragraphs) and/or embedded ones. see p. 3 for details.

What's new in version 3.0?

Many deep changes lead me to step babel-french's version number to 3.0a:

- Babel 3.9 is required now to process frenchb.ldf, this change allows for cleaner definitions of dates and captions for the Unicode engines LuaTeX and XeTeX and also provides a simpler syntax for end-users, see section 1.2.2 p.9.
- \frenchsetup{} options management has been completely reworked; two new options added.
- Canadian French didn't work as a normal Babel's dialect, it should now; btw. the French language should now be loaded as french, *not* as frenchb or francais and preferably as a *global* option of \documentclass. Some tolerance still exists in v3.0, but do not rely on it.
- babel-french no longer loads frenchb.cfg: customisation should definitely be done using \frenchsetup{} options.
- Description lists labels are now indented; try setting \descindentFB=0pt (or \listindentFB=0pt for all lists) in the preamble if you don't like it.
- The last but not least change affects the (recent) LuaTeX-based engines, (this means version 0.76 as included in TL2013 and up): active characters are no longer used in French for 'high punctuation' ¹¹. Functionalities and user interface are unchanged.

Many thanks to Paul Isambert who provided the basis for the lua code (see his presentation at GUT'2010) and kindly reviewed my first drafts suggesting significant improvements.

Starting with version 3.0c, babel-french no longer customises lists with the beamer class and offers a new option (**INGuillSpace**) to follow French 'Imprimerie Nationale' recommendations regarding quotes' spacing.

¹¹The current babel-french version requires LuaTeX v. 1.0.4 as included in TL2017, see above.

2 The code

2.1 Initial setup

The macro \LdfInit takes care of preventing that this file is loaded more than once (even if both options french and acadian are used in the same document), checking the category code of the @ sign, etc.

```
1 <*french>
2 \LdfInit\CurrentOption{FBclean@on@exit}
```

Let's provide a substitute for \PackageError, \PackageWarning and \PackageInfo not defined in Plain:

```
3 \def\fb@error#1#2{%
4   \begingroup
5     \newlinechar=`\^J
6     \def\\{\^J(french.ldf) }%
7     \errhelp{#2}\errmessage{\\\#1^J}%
8   \endgroup
9 \def\fb@warning#1{%
10   \begingroup
11     \newlinechar=`\^J
12     \def\\{\^J(french.ldf) }%
13     \message{\\\#1^J}%
14   \endgroup
15 \def\fb@info#1{%
16   \begingroup

73       {LaTeX-2.09 format is no longer supported.\MessageBreak
74        Aborting here}
75       {Please upgrade to LaTeX2e!}
76   \let\bbl@tempa\endinput
77 \fi
78 \fi
79 \bbl@tempa

```

\iffBunicode French hyphenation patterns are now coded in Unicode, see file `hyph-fr.tex`. XeTeX \iffBLuaTeX and LuaTeX engines require some extra code to deal with the French “apostrophe”. \ifFBXeTeX Let’s define three new ‘if’: \iffBLuaTeX, \iffBXeTeX and \iffBunicode which will be true for XeTeX and LuaTeX engines and false for 8-bits engines.

```

80 \newif\iffBunicode
81 \newif\iffBLuaTeX
82 \newif\iffBXeTeX
83 \begingroup\expandafter\expandafter\expandafter\endgroup
84 \expandafter\ifx\csname luatexversion\endcsname\relax
85 \else
86   \FBunicodetrue \FBLuaTeXtrue
87 \fi
88 \begingroup\expandafter\expandafter\expandafter\endgroup
89 \expandafter\ifx\csname XeTeXrevision\endcsname\relax
90 \else
91   \FBunicodetrue \FBXeTeXtrue
92 \fi

```

\iffBfrench True when the current language is French or any of its dialects; will be set to true by \extrasfrench and to false by \noextrasfrench. Used in \DecimalMathComma and frenchsetup{og=<, fg=>}.

```
93 \newif\iffBfrench
```

\extrasfrench The macro \extrasfrench will perform all the extra definitions needed for the \noextrasfrench French language. The macro \noextrasfrench is used to cancel the actions of \extrasfrench.

In French, character “apostrophe” (U+27 or U+2019) is a letter in expressions like l’ambulance (French hyphenation patterns provide entries for this kind of words). This means that the \lccode of “apostrophe” has to be non null in French for proper hyphenation of those expressions, and has to be reset to null when exiting French. The following code ensures correct hyphenation of words like d’aventure, l’utopie, with all TeX engines (XeTeX, LuaTeX, pdfTeX) using `hyph-fr.tex` patterns.

```

94 \def\extrasfrench{%
95   \FBfrenchtrue
96   \babel@savevariable{\lccode"27}%
97   \lccode"27="27
98   \iffBunicode
99     \babel@savevariable{\lccode"2019}%
100    \lccode"2019="2019
101  \fi
102 }
103 \def\noextrasfrench{\FBfrenchfalse}

```

One more thing \extrasfrench needs to do is to make sure that “Frenchspacing” is in effect. \noextrasfrench will switch “Frenchspacing” off again if necessary.

```

104 \addto\extrasfrench{\bbl@frenchspacing}
105 \addto\noextrasfrench{\bbl@nonfrenchspacing}

```

2.2 Punctuation

As long as no better solution is available, the ‘high punctuation’ characters (; ! ? and :) have to be made \active for an automatic control of the amount of space to be inserted before them. Both XeTeX and LuaTeX provide an alternative to active characters (‘XeTeXinterchar’ mechanism and LuaTeX’s callbacks).

\iffB@active@punct Three internal flags are needed for the three different techniques used for ‘high punctuation’ management.

```
106 \newif\iffB@active@punct \FB@active@puncttrue
```

\iffB@luatex@punct With LuaTeX, starting with version 1.0.4, callbacks are used to get rid of active punctuation. With previous versions, ‘high punctuation’ characters remain active (see below).

```
107 \newif\iffB@luatex@punct
108 \ifFBLuaTeX
109   \ifnum\luatexversion<100
110     \ifx\PackageWarning@\undefined
111       \fb@warning{Please upgrade LuaTeX to version 1.0.4 or above!\\%
112         babel-french will make high punctuation characters (;!:?)\\%
113         active with LuaTeX < 1.0.4.}%
114   \else
115     \PackageWarning{french.ldf}{Please upgrade LuaTeX
116       to version 1.0.4 or above!\MessageBreak
117       babel-french will make high punctuation characters%
118       \MessageBreak (;!:?) active with LuaTeX < 1.0.4;%
119       \MessageBreak reported}%
120   \fi
121 \else
122   \FB@luatex@puncttrue\FB@active@punctfalse
123 \fi
124 \fi
```

\iffB@xetex@punct For XeTeX, the availability of \XeTeXinterchartokenstate decides whether the ‘high punctuation’ characters (; ! ? and :) have to be made \active or not.

The number of available character classes has been increased from 256 to 4096 in XeTeX v. 0.99994, the class for non-characters is now 0xFFFF=4095 (formerly 0xFF=255). The class for standard characters is 0.

```
125 \newcount\FB@stdchar
126 \newif\iffB@xetex@punct
127 \ifdefined\XeTeXinterchartokenstate
128   \FB@xetex@puncttrue\FB@active@punctfalse
129   \ifdim\the\XeTeXversion\XeTeXrevision\p@ < 0.99994\p@
130     \chardef\FB@nonchar="FF \relax
131   \else
132     \chardef\FB@nonchar="FFF \relax
133   \fi
134   \FB@stdchar=\z@
135 \fi
```

\FBguillspace These three commands are meant for basic French. Other French dialects can use \FBcolonspace different settings, see below. According to the I.N. specifications, the ‘:’ requires \FBthinspace

an inter-word space before it, the other three require just a thin space. We define \FBcolonspace as \space (inter-word space) and \FBthinspace as an half inter-word space with no shrink nor stretch. \FBguillspace is defined btw. as spacing for French quotes is handled together with high punctuation for LuaTeX and XeTeX. \FBguillspace has been fine tuned by Thierry Bouche to 80% of an inter-word space with reduced stretchability. All three are user customisable in the preamble, best using the \FBsetspace command described below. A penalty will be added before these spaces to prevent line breaking.

```

136 \newcommand*{\FBguillspace}{\hspace{.8\fontdimen2\font
137               plus .3\fontdimen3\font
138               minus .8\fontdimen4\font} \relax}
139 \newcommand*{\FBcolonspace}{\space}
140 \newcommand*{\FBthinspace}{\hspace{.5\fontdimen2\font} \relax}
```

\FBsetspace This command makes it easy to fine tune \FBguillspace, \FBcolonspace and \FBthinspace in French (default) or independently in a French dialect using the optional argument. They are meant for LaTeX2e *only* and can only be used in the preamble. Four mandatory arguments are expected besides the optional one: the first one is a *string* either "guill", "colon", or "thin", the last four are decimal numbers specifying *width*, *stretch* and *shrink* relative to *fontdimens*. For instance \FBsetspace[acadian]{colon}{0.5}{0}{0} defines \acadianFBcolonspace as a thinspace which will be used for the Acadian dialect only. When used without optional argument or with argument 'french', the same command would tune the basic \FBcolonspace command.

```

141 \ifLaTeXe
142   \newcommand*{\FBsetspace}[5][french]{%
143     \def\bbl@tempa{french}\def\bbl@tempb{\#1}%
144     \ifx\bbl@tempa\bbl@tempb \def\bbl@tempb{} \fi
145     \namedef{\bbl@tempb FB#2space}{\hspace{#3\fontdimen2\font
146                           plus #4\fontdimen3\font
147                           minus #5\fontdimen4\font} \relax} %
```

With option "acadian", fill the corresponding LaTeX table. All unset values in the "acadian" subtables will be filled 'AtBeginDocument' by \set@glue@table with the value available for "french".

```

148   \ifFB@luatex@punct
149     \ifx\bbl@tempb\FB@acadian
150       \directlua{
151         FBsp.#2.gl.ac[1] = #3
152         FBsp.#2.gl.ac[2] = #4
153         FBsp.#2.gl.ac[3] = #5
154         if #3 > 0.6 then
155           FBsp.#2.ch.ac = 0xA0
156         elseif #3 > 0.2 then
157           FBsp.#2.ch.ac = 0x202F
158         else
159           FBsp.#2.ch.ac = 0x200B
160         end
161       }%
162     \fi
163   \fi
```

```

164  }
165  \onlypreamble\FBsetspace
166 \fi

```

Remember that the *same* `\extrasfrench` command is executed when switching to French or to a French dialect (Acadian). Acadian and French may share the same patterns (or not), and may use different spacing for high punctuation and/or quotes. Basically, for pdfLaTeX and XeLaTeX, the spacing is set for French, then potentially tuned differently for Acadian. LuaTeX relies on an attribute `\FB@dialect` to decide what spacing is needed for French or Acadian (see LuaTeX table `FBsp`). As a rough test on `\languagename` would be unreliable to set the value of `\FB@dialect` (see `babel.pdf`), we use a trick based on `\detokenize`; another option would be to use the `\IfLanguageName` command from Oberdiek's package `iflang`.

```

167 \ifLaTeXe
168   \addto\extrasfrench{%
169     \ifFB@luatex@punct
170       \edef\bbl@tempa{\detokenize\expandafter{\languagename}}%
171       \edef\bbl@tempb{\detokenize{french}}%
172       \ifx\bbl@tempa\bbl@tempb \FB@dialect=\z@
173       \else                      \FB@dialect=\@ne
174     \fi

```

When first entering French, we must set the LuaTeX tables for French (`\FB@dialect=0`) *before* any dialect redefines any `\FB...space` command. Doing this 'AtBeginDocument' would be too late: if French or a French dialect is the main language, `\extrasfrench` has been executed before!

```

175   \ifdefined\FB@once\else
176     \set@glue@table{colon}%
177     \set@glue@table{thin}%
178     \set@glue@table{guill}%
179     \def\FB@once{}%
180   \fi
181 \fi

```

Any dialect dependent customisation done using `\FBsetspace[dialect]` command or alike is now taken into account: the value of `\FBthinspace` (meant for French, i.e. `\FB@dialect=0`) is first saved then changed (for Acadian).

```

182   \ifcsname\languagename FBthinspace\endcsname
183     \babel@save\FBthinspace
184     \renewcommand*\{\FBthinspace}{%
185       \csname\languagename FBthinspace\endcsname}%
186   \fi

```

Same for `\FBcolonspace`:

```

187   \ifcsname\languagename FBcolonspace\endcsname
188     \babel@save\FBcolonspace
189     \renewcommand*\{\FBcolonspace}{%
190       \csname\languagename FBcolonspace\endcsname}%
191   \fi

```

And for `\FBguillspace`:

```

192   \ifcsname\languagename FBguillspace\endcsname
193     \babel@save\FBguillspace
194     \renewcommand*\{\FBguillspace}{%

```

```

195      \csname\languagename FBguillspace\endcsname}%
196      \fi
197  }
198 \fi

```

The conditional `\ifFB@spacing` will be used by pdfTeX and XeTeX engines to switch on or off space tuning before high punctuation and inside French quotes. A matching attribute will be defined later for LuaTeX.

```
199 \newif\ifFB@spacing \FB@spacingtrue
```

`\FB@spacing@off` Two internal commands to switch on and off all space tuning for all six characters `\FB@spacing@on` ‘`::!?`’’. They will be triggered by user command `\NoAutoSpacing` and by font family switching commands `\ttfamilyFB` `\rmfamilyFB` and `\sffamilyFB`. These four commands will now behave the same with any engine (up to version 3.2b, results were engine dependent).

```

200 \ifFB@luatex@punct
201   \newcommand*\{\FB@spacing@on}{\FB@spacing=\@ne}
202   \newcommand*\{\FB@spacing@off}{\FB@spacing=\z@}
203 \else
204   \newcommand*\{\FB@spacing@on}{\FB@spacingtrue}
205   \newcommand*\{\FB@spacing@off}{\FB@spacingfalse}
206 \fi

```

2.2.1 Punctuation with LuaTeX

The following part holds specific code for punctuation with modern LuaTeX engines, i.e. version 1.0.4 (included in TL2017) or newer.

```

207 \ifFB@luatex@punct
208   \ifdefined\newluafunction\else

```

This code is for Plain: load `ltluatex.tex` if it hasn't been loaded before Babel.

```

209   \input ltluatex.tex
210 \fi

```

We define five LuaTeX attributes to control spacing in French and/or Acadian for ‘high punctuation’ and quotes, making sure that `\newattribute` is defined.

`\FB@spacing=0` switches off any space tuning both before high punctuation characters and inside French quotes (i.e. function `french_punctuation` doesn't alter the node list at all).

`\FB@addDPSpace=0` switches off automatic insertion of spaces before high punctuation characters (but typed spaces are still turned into non-breaking thin- or word-spaces). `\FB@addGUILspace` will be set to 1 by option `og=<`, `fg=>`, thus enabling automatic insertion of proper spaces after ‘`<`’ and before ‘`>`’.

`\FB@ucsNBSP` triggers the replacement of glues by characters, it is controlled by option `UnicodeNoBreakSpaces`.

`\FB@dialect` is 0 for French and 1 for Acadian; its value controls which parts of the glue table (`.fr` or `.ac`) are taken into account.

```

211 \newattribute\FB@spacing     \FB@spacing=\@ne
212 \newattribute\FB@addDPSpace  \FB@addDPSpace=\@ne
213 \newattribute\FB@addGUILspace \FB@addGUILspace=\z@
214 \newattribute\FB@ucsNBSP    \FB@ucsNBSP=\z@
215 \newattribute\FB@dialect    \FB@dialect=\z@

```

```

216  \ifLaTeXe
217      \PackageInfo{french.ldf}{No need for active punctuation
218          characters\MessageBreak with this version
219          of LaTeX!\MessageBreak reported}
220  \else
221      \fb@info{No need for active punctuation characters\\
222          with this version of LaTeX!}
223  \fi

```

The next command will be used in the first call of `\extrasfrench` to convert `\FBcolonspace`, `\FBthinspace` and `\FBguillspace` into a table usable by LaTeX. This way, any customisation done in the preamble (by `\frenchsetup{}`, redefinitions or `\FBsetspace` commands) are taken into account. Values not explicitly set for Acadian by `\FBsetspace[acadian]` commands are copied from the French ones. In case parsing by the Lua function `FBget_glue` (defined in file `frenchb.lua`) fails due to unexpected syntax in `\FB...space` the table remains unchanged and a warning is issued. The matching space characters for option `UnicodeNoBreakSpaces` are set as word space, thin space or null space according to the `width` parameter.

```

224  \newcommand*\set@glue@table}[1]{%
225      \directlua {
226          local s = token.get_meaning("FB#1space")
227          local t = FBget_glue(s)
228          if t then
229              FBsp.#1.gl.fr = t

247              texio.write_nl('term and log',
248                  '*** french.ldf warning: LaTeX table FBsp unchanged.')
249              texio.write_nl('term and log',
250                  '*** french.ldf warning: Consider using FBsetspace to ')
251              texio.write('term and log', 'customise FB#1space.')
252              texio.write_nl('term and log', '')
253          end
254      }%
255  }
256 \fi
257 </french>

```

frenchb.lua (env.) This is frenchb.lua. It holds Lua code to deal with ‘high punctuation’ and quotes. This code is based on suggestions from Paul Isambert. First we define two flags to control spacing before French ‘high punctuation’ (thin space or inter-word space).

```

258 <*lua>
259 local FB_punct_thin =
260   {[string.byte("!")] = true,
261   [string.byte("?")] = true,
262   [string.byte(";")] = true}
263 local FB_punct_thick =
264   {[string.byte(":")] = true}

```

Managing spacing after ‘⟨’ (U+00AB) and before ‘⟩’ (U+00BB) can be done by the way; we define two flags, FB_punct_left for characters requiring some space before them and FB_punct_right for ‘⟨’ which must be followed by some space. In case LuaTeX is used to output T1-encoded fonts instead of OpenType fonts, codes 0x13 and 0x14 have to be added for ‘⟨’ and ‘⟩’.

```

265 local FB_punct_left =
266   {[string.byte("!")] = true,
267   [string.byte("?")] = true,
268   [string.byte(";")] = true,
269   [string.byte(":")] = true,
270   [0x14]           = true,
271   [0xBB]           = true}
272 local FB_punct_right =
273   {[0x13]          = true,
274   [0xAB]          = true}

```

Two more flags will be needed to avoid spurious spaces in strings like !! ?? or (?)

```

275 local FB_punct_null =
276   {[string.byte("!")] = true,
277   [string.byte("?")] = true,
278   [string.byte("[")] = true,
279   [string.byte("(")] = true,

```

or if the user has typed a non-breaking space U+00A0 or U+202F (thin) before a ‘high punctuation’ character: no space should be added by babel-french. Same is true inside French quotes.

```

280   [0xA0]           = true,
281   [0x202F]          = true}
282 local FB_guil_null =
283   {[0xA0]           = true,
284   [0x202F]          = true}

```

Local definitions for nodes:

```

285 local new_node    = node.new
286 local copy_node   = node.copy
287 local node_id     = node.id
288 local HLIST       = node_id("hlist")
289 local TEMP        = node_id("temp")
290 local DISC        = node_id("disc")
291 local KERN        = node_id("kern")
292 local GLUE        = node_id("glue")
293 local GLYPH       = node_id("glyph")

```

```

294 local PENALTY      = node_id("penalty")
295 local nobreak      = new_node(PENALTY)
296 nobreak.penalty    = 10000
297 local nbspace      = new_node(GLYPH)
298 local insert_node_before = node.insert_before
299 local insert_node_after = node.insert_after
300 local remove_node   = node.remove

```

Commands \FBthinspace, \FBcolonspace and \FBguillspace are converted ‘AtBeginDocument’ by the next function FBget_glue into tables of three values which are fractions of \fontdimen2, \fontdimen3 and \fontdimen4. If parsing fails due to unexpected syntax, the function returns *nil* instead of a table.

```

301 function FBget_glue(toks)
302   local t = nil
303   local f = string.match(toks,
304                           "[^%w]hskip%s*([%d%.]*%)%s*[^\%w]fontdimen 2")
305   if f == "" then f = 1 end
306   if tonumber(f) then
307     t = {tonumber(f), 0, 0}
308     f = string.match(toks, "plus%s*([%d%.]*%)%s*[^\%w]fontdimen 3")
309     if f == "" then f = 1 end
310     if tonumber(f) then
311       t[2] = tonumber(f)
312       f = string.match(toks, "minus%s*([%d%.]*%)%s*[^\%w]fontdimen 4")
313       if f == "" then f = 1 end
314       if tonumber(f) then
315         t[3] = tonumber(f)
316       end
317     end
318   elseif string.match(toks, "[^\%w]F?B?thinspace") then
319     t = {0.5, 0, 0}
320   elseif string.match(toks, "[^\%w]space") then
321     t = {1, 1, 1}
322   end
323   return t
324 end

```

Let’s initialize the global LuaTeX table FBsp: it holds the characteristics of the glues used in French and Acadian for high punctuation and quotes and the corresponding no-breaking space characters for option **UnicodeNoBreakSpaces**.

```

325 FBsp = {}
326 FBsp.thin = {}
327 FBsp.thin.gl = {}
328 FBsp.thin.gl.fr = {.5, 0, 0} ; FBsp.thin.gl.ac = {}

330 FBsp.thin.ch.fr = 0x202F ; FBsp.thin.ch.ac = nil
331 FBsp.colon = {}
332 FBsp.colon.gl = {}
333 FBsp.colon.gl.fr = {1, 1, 1} ; FBsp.colon.gl.ac = {}
334 FBsp.colon.ch = {}
335 FBsp.colon.ch.fr = 0xA0 ; FBsp.colon.ch.ac = nil
336 FBsp.guill = {}
337 FBsp.guill.gl = {}
338 FBsp.guill.gl.fr = {.8, .3, .8} ; FBsp.guill.gl.ac = {}

```

```

339 FBsp.guill.ch = {}
340 FBsp.guill.ch.fr = 0xA0 ; FBsp.guill.ch.ac = nil

```

The next function converts the glue table returned by function FBget_glue into sp for the current font; beware of null values for fid, see \nullfont in TikZ, and of special fonts like lcircle1.pfb for which font.getfont(fid) does not return a proper font table, in such cases the function returns nil.

```

341 local font_table = {}
342 local function new_glue_scaled (fid,table)
343   if fid > 0 and table[1] then
344     local fp = font_table[fid]
345     if not fp then
346       local ft = font.getfont(fid)
347       if ft then
348         font_table[fid] = ft.parameters
349         fp = font_table[fid]
350       end
351     end
352     local gl = new_node(GLUE,0)
353     if fp then
354       node.setglue(gl, table[1]*fp.space,
355                   table[2]*fp.space_stretch,
356                   table[3]*fp.space_shrink)
357     return gl
358   else
359     return nil
360   end
361 else
362   return nil
363 end
364 end

```

Let's catch LuaTeX attributes \FB@spacing, \FB@addDPspace and \FB@addGUILspace.

```

365 local FBspacing    = luatexbase.attributes['FB@spacing']
366 local addDPspace   = luatexbase.attributes['FB@addDPspace']
367 local addGUILspace = luatexbase.attributes['FB@addGUILspace']
368 local FBucsNBSP   = luatexbase.attributes['FB@ucsNBSP']
369 local FBdialect    = luatexbase.attributes['FB@dialect']
370 local has_attribute = node.has_attribute

```

The following function will be added to kerning callback. It catches all nodes of type GLYPH in the list starting at head and checks the language attributes of the current glyph: nothing is done if the current language is not French and only specific punctuation characters (those for which FB_punct_left or FB_punct_right is true) need a special treatment. In French, local variables are defined to hold the properties of the current glyph (item) and of the previous one (prev) or the next one (next). Constants FR_fr (french) and FR_ca (acadian) are defined by command \activate@luatexpunct.

```

371 -- Main function (to be added to the kerning callback).
372 local function french_punctuation (head)

```

Restore the built-in kerning for 8-bits fonts.

```

373   node.kerning(head)
374   for item in node.traverse_id(GLYPH, head) do

```

```

375     local lang = item.lang
376     local char = item.char
377     if (lang == FR_fr or lang == FR_ca) and
378         (FB_punct_left[char] or FB_punct_right[char]) then
379         local fid = item.font
380         local attr = item.attr
381         local FRspacing = has_attribute(item, FBspacing)
382         FRspacing = FRspacing and FRspacing > 0
383         local FRucsNBSP = has_attribute(item, FBucsNBSP)
384         FRucsNBSP = FRucsNBSP and FRucsNBSP > 0
385         local FRdialect = has_attribute(item, FBdialect)
386         FRdialect = FRdialect and FRdialect > 0
387         local SIG = has_attribute(item, addGUILspace)
388         SIG = SIG and SIG > 0
389         if FRspacing and fid > 0 then
390             if FB_punct_left[char] then
391                 local prev = item.prev
392                 local prev_id, prev_subtype, prev_char
393                 if prev then
394                     prev_id = prev.id
395                     prev_subtype = prev.subtype
396                     if prev_id == GLYPH then
397                         prev_char = prev.char
398                     end
399                 end

```

If the previous node is a glue, check its natural width, only positive glues (actually glues > 1 sp, for tabular 'l' columns) are to be replaced by a non-breaking space.

```

400         local is_glue = prev_id == GLUE
401         local glue_wd
402         if is_glue then
403             glue_wd = prev.width
404         end
405         local realglue = is_glue and glue_wd > 1

```

For characters for which FB_punct_thin or FB_punct_thick is *true*, the amount of spacing to be typeset before them is controlled by commands \FBthinspace and \FBcolonspace respectively. Two options: if a space has been typed in before (turned into *glue* in the node list), we remove the *glue* and add a nobreak penalty and the required *glue*. Otherwise (auto option), the penalty and the required *glue* are inserted if attribute \FB@addDPspace is set, unless any of these four conditions is met: a) node is ':' and the next one is of type GLYPH (avoids spurious spaces in http://mysite, C:\ or 10:35); b) the previous character is part of type FB_punct_null (avoids spurious spaces in strings like (!) or ??); c) a null glue (actually <= 1 sp for tabulars, possibly < 0) precedes the punctuation character (for tabulars and listings); d) the punctuation character starts a paragraph or an \hbox{}.

When option **UnicodeNoBreakSpaces** is set to **true**, a Unicode character U+00A0 or U+202F is inserted instead of penalty and glue.

```

406         if FB_punct_thin[char] or FB_punct_thick[char] then
407             local SBDP = has_attribute(item, addDPspace)
408             local auto = SBDP and SBDP > 0
409             if FB_punct_thick[char] and auto then

```

```

410         local next = item.next
411         local next_id
412         if next then
413             next_id = next.id
414         end
415         if next_id and
416             (next_id == GLYPH or next_id == DISC) then
417                 auto = false
418             end
419         end
420         if auto then
421             if (prev_char and FB_punct_null[prev_char]) or
422                 (is_glue and glue_wd <= 1) or
423                 (prev_id == HLIST and prev_subtype == 3) or
424                 (prev_id == TEMP) then
425                     auto = false
426                 end
427             end
428             local fbglue
429             local t
430             if FB_punct_thick[char] then
431                 if FRdialect then
432                     t = FBsp.colon.gl.ac
433                     nbspace.char = FBsp.colon.ch.ac
434                 else
435                     t = FBsp.colon.gl.fr
436                     nbspace.char = FBsp.colon.ch.fr
437                 end
438             else
439                 if FRdialect then
440                     t = FBsp.thin.gl.ac
441                     nbspace.char = FBsp.thin.ch.ac
442                 else
443                     t = FBsp.thin.gl.fr
444                     nbspace.char = FBsp.thin.ch.fr
445                 end
446             end
447             fbglue = new_glue_scaled(fid, t)

```

In case new_glue_scaled fails (returns nil) the node list remains unchanged.

```

448             if (realglue or auto) and fbglue then
449                 if realglue then
450                     head = remove_node(head, prev, true)
451                 end
452                 if (FRucsNBSP) then
453                     nbspace.font = fid
454                     nbspace.attr = attr
455                     insert_node_before(head, item, copy_node(nbspace))
456                 else
457                     nobreak.attr = attr
458                     fbglue.attr = attr
459                     insert_node_before(head, item, copy_node(nobreak))
460                     insert_node_before(head, item, copy_node(fbglue))
461                 end

```

```
462           end
```

Let's consider '»' now (the only remaining glyph of FB_punct_left class): we just have to remove any *glue* possibly preceding '», then to insert the nobreak penalty and the proper *glue* (controlled by \FBguillspace). This is done only if French quotes have been 'activated' by options **og=<**, **fg=>** in \frenchsetup{} and can be denied locally with \NoAutoSpacing (this is controlled by the SIG flag). If either a) the preceding glyph is member of FB_guil_null, or b) '»' is the first glyph of an \hbox{} or a paragraph, nothing is done, this is controlled by the addgl flag.

```
463     elseif SIG then
464         local addgl = (prev_char and
465                         not FB_guil_null[prev_char])
466             or
467             (not prev_char and
468                 prev_id ~= TEMP and
469                 not (prev_id == HLIST and
470                     prev_subtype == 3))
471     )
```

Correction for tabular 'c' (glue 0 plus 1 fil) and 'l' (glue 1sp) columns:

```
472         if is_glue and glue_wd <= 1 then
473             addgl = false
474         end
475         local t = FBsp.guill.gl.fr
476         nbspace.char = FBsp.guill.ch.fr
477         if FRdialect then
478             t = FBsp.guill.gl.ac
479             nbspace.char = FBsp.guill.ch.ac
480         end
481         local fbglue = new_glue_scaled(fid, t)
482         if addgl and fbglue then
483             if is_glue then
484                 head = remove_node(head, prev, true)
485             end
486             if (FRucsNBSP) then
487                 nbspace.font = fid
488                 nbspace.attr = attr
489                 insert_node_before(head, item, copy_node(nbspace))
490             else
491                 nobreak.attr = attr
492                 fbglue.attr = attr
493                 insert_node_before(head, item, copy_node(nobreak))
494                 insert_node_before(head, item, copy_node(fbglue))
495             end
496         end
497     end
```

Similarly, for '«' (unique member of the FB_punct_right class): unless either a) the next glyph is member of FB_guil_null, or b) '«' is the last glyph of an \hbox{} or a paragraph (then the addgl flag is false, nothing is done), we remove any *glue* possibly following it and insert first the proper *glue* then a nobreak penalty so that finally the penalty preceeds the *glue*.

```
498     elseif SIG then
```

```

499     local next = item.next
500     local next_id, next_subtype, next_char, nextnext, kern_wd
501     if next then
502         next_id = next.id
503         next_subtype = next.subtype

```

In case of coding «~ remove the penalty and the glue:

```

504         if next_id == PENALTY then
505             nextnext = next.next
506             if nextnext and nextnext.id == GLUE then
507                 head = remove_node(head,nextnext,true)
508                 head = remove_node(head,next,true)
509                 next = item.next
510                 if next then
511                     next_id = next.id
512                     next_subtype = next.subtype
513                     if next_id == GLYPH then
514                         next_char = next.char
515                     end
516                 end
517             end
518         end

```

A kern0 might hide a penalty and/or glue, so look ahead if next is a kern (this occurs with « \texttt{a} » and «~\texttt{a}~»):

```

519         if next_id == KERN then
520             kern_wd = next.kern
521             if kern_wd == 0 then
522                 nextnext = next.next
523                 if nextnext then
524                     next = nextnext
525                     next_id = nextnext.id
526                     next_subtype = nextnext.subtype
527                     if next_id == PENALTY then
528                         nextnext = next.next
529                         if nextnext and nextnext.id == GLUE then
530                             head = remove_node(head,next,true)
531                             head = remove_node(head,nextnext,true)

574             insert_node_after(head, item, copy_node(fbglue))
575             insert_node_after(head, item, copy_node(nobreak))
576         end
577     end
578   end
579 end
580 end
581 end
582 return head
583 end
584 return french_punctuation
585 </lua>

```

As a language tag is part of glyph nodes in LuaTeX, no more switching has to be done in \extrasfrench, setting the dialect attribute has already be done (see above, p. 19).

The next definition will be used to activate Lua punctuation: it loads frenchb.lua and adds function french_punctuation to the kerning callback; "adding" anything actually disables the built-in kerning for Type1 fonts (which is now added to french_punctuation).

```

586 <*french>

599     texio.write_nl('Error: frenchb.lua not found.')
600     texio.write_nl('*****')
601     texio.write_nl('')
602   end
603 }
604 }%
605 \fi

```

End of specific code for punctuation with LuaTeX engines.

2.2.2 Punctuation with XeTeX

If `\XeTeXinterchartokenstate` is available, we use the “inter char” mechanism to provide correct spacing in French before the four characters ; ! ? and :. The basis of the following code was borrowed from the `polyglossia` package, see `gloss-french. ldf`. We use the same mechanism for French quotes (« and »), when automatic spacing for quotes is required by options `og=<` and `fg=>` in `\frenchsetup{}` (see section 2.11).

Unless `ucharclass` is loaded, the default value for `\XeTeXcharclass` is 0 for characters tokens and `\FB@nonchar` for all other tokens (glues, kerns, math and box boundaries, etc.). `ucharclass` defines a XeTeX class for every range of Unicode characters in order to facilitate font switching. Most French characters belong to range [“20, “7F] (class `\BasicLatinClass`) some (accented chars, diacritics,...) to range [“80, “FF] (class `\LatinSupplementClass`) and three (œ, œ, and the long-s) to [“100, “17F] (class `\LatinExtendedAClass`).

We check `AtBeginDocument` whether `ucharclass` is loaded; if so, when switching to French, the class `\FB@stdchar` of all characters possibly used in French (except punctuation) will be forced to `\BasicLatinClass` which is the default for most of them, the class of the others (accented chars, ligatures, diacritics, etc.) will be saved and changed locally in French, then restored to their original value when leaving French. We switch `\XeTeXinterchartokenstate` to 1 and change the `\XeTeXcharclass` values of ; ! ? : () « and » when entering French. Their initial values will be restored when leaving French.

The following part holds specific code for punctuation with XeTeX engines.

```

606 \ifFB@xetex@punct
607   \ifLaTeXe
608     \PackageInfo{french. ldf}{No need for active punctuation
609                           characters\MessageBreak with this
610                           version of XeTeX!\MessageBreak reported}
611   \else
612     \fb@info{No need for active punctuation characters\}

```

```

613           with this version of XeTeX!}
614 \fi

```

Six new character classes are defined for babel-french.

```

615 \newXeTeXintercharclass\FB@punctthick
616 \newXeTeXintercharclass\FB@punctthin
617 \newXeTeXintercharclass\FB@punctnul
618 \newXeTeXintercharclass\FB@guilo
619 \newXeTeXintercharclass\FB@guilf
620 \newXeTeXintercharclass\FB@guilnul

```

As `\babel@savevariable` doesn't work inside a `\bbl@for` loop, we define a variant to save the `\XeTeXcharclass` values which will be modified in French.

```

621 \def\FB@savevariable@loop#1#2{\begingroup
622   \toks@\expandafter{\originalTeX #1}%
623   \edef\x{\endgroup
624     \def\noexpand\originalTeX{\the\toks@ #2=\the#1#2\relax}}%
625   \x}

```

`\FB@charlistsave` holds the all list of characters which have their `\XeTeXcharclass` value modified in French: it always includes high punctuation, French quotes, opening delimiters and no-break spaces. If `ucharclasses` is loaded, non-ascii characters used in French have to be added; as `xeCJK` changes the class of some characters used in French, these have to be saved too if `xeCJK` is loaded.

```

626 \def\FB@charlist{"21,"3A,"3B,"3F,"AB,"BB,"28,"5B,"A0,"202F}
627 \def\FB@charlistUCC{}
628 \def\FB@charlistxeCJK{}
629 \edef\FB@charlistsave{\FB@charlist}
630 \ifLaTeXe
631   \AtBeginDocument{%
632     \@ifpackageloaded{ ucharclasses }{%
633       \ifdefined\BasicLatinClass
634         \RenewCommandCopy{\FB@stdchar}{\BasicLatinClass}%
635         \def\FB@charlistUCC{"C0,"C2,"C6,"C7,"C8,"C9,"CA,"CB,"CE,"CF,%
636           "D4,"D6,"D9,"DB,"DC,"E0,"E2,"E6,"E7,"E8,"E9,"EA,"EB,"EE,%
637           "EF,"F4,"F6,"F9,"FB,"FC,"152,"153,"17F,"2019}%
638         \addto\FB@charlist{\FB@charlistUCC}%
639         \edef\FB@charlistsave{\FB@charlist}%
640       \fi
641     }{%
642       \@ifpackageloaded{ xeCJK }{%
643         \def\FB@charlistxeCJK{%
644           "29,"5D,"7B,"7D,"2C,"2D,"2E,"22,"25,"27,"60,"2019}%
645         \addto\FB@charlist{\FB@charlistxeCJK}%
646         \edef\FB@charlistsave{\FB@charlist}%
647       }{%
648     }
649   \fi

```

`\FB@xetex@punct@french` The following command will be executed when entering French, it first saves the values to be modified, then fits them to our needs.

```

650 \newcommand*{\FB@xetex@punct@french}{%
651   \babel@savevariable{\XeTeXinterchartokenstate}%
652   \bbl@for\FB@char\FB@charlistsave

```

```
653           {\FB@savevariable@loop{\XeTeXcharclass}{\FB@char}}%
```

If ucharclasses is loaded, force non-ascii used in French to class \FB@stdchar (=\\BasicLatinClass).

```
654     \ifx\FB@charlistUCC\empty\else
655         \bbbl@for\FB@char\FB@charlistUCC
656             {\XeTeXcharclass \FB@char \FB@stdchar}%
657     \fi
```

These characters have their class changed by xeCJK.sty, let's reset their class in French.

```
658     \ifx\FB@charlistxeCJK\empty\else
659         \bbbl@for\FB@char\FB@charlistxeCJK
660             {\XeTeXcharclass\FB@char=\FB@stdchar}%
661     \fi
```

This will avoid spurious spaces in (!), [?] and with Unicode non-breaking spaces (U+00A0, U+202F):

```
662     \bbbl@for\FB@char {\`[, `\", "A0, "202F}%
663         {\XeTeXcharclass\FB@char=\FB@punctnul}%
```

Let's now define specific classes for punctuation and interactions between classes. When false, the flag \iffB@spacing switches off any interaction between classes (this flag is controlled by user-level command \NoAutoSpacing; this flag is also set to false when the current font is a typewriter font).

```
664     \XeTeXinterchartokenstate=\@ne
665     \XeTeXcharclass `\: = \FB@punctthick
666     \XeTeXinterchartoks \FB@stdchar \FB@punctthick = {%
667         \iffB@spacing\ifhmode\FDP@colonspace\fi\fi}%
668     \XeTeXinterchartoks \FB@guilf \FB@punctthick = {%
669         \iffB@spacing\FDP@colonspace\fi}%
```

Small glues such as “glue 1sp” in tabular ‘l’ columns or “glue 0 plus 1 fil” in tabular ‘c’ columns or lstlisting environment should not trigger any extra space; they will still do when **AutoSpacePunctuation** is true: \XeTeXcharclass=\FB@nonchar isn't specific to glue tokens (this class includes box and math boundaries f.i.), so the \else part cannot be omitted.

```
670     \XeTeXinterchartoks \FB@nonchar \FB@punctthick = {%
671         \iffB@spacing
672             \ifhmode
673                 \ifdim\lastskip>1sp
674                     \unskip\penalty@M\FBcolonspace
675                 \else
676                     \FDP@colonspace
677                 \fi
678             \fi
679         \fi}%
680     \bbbl@for\FB@char {\`;, `!\!, `?\?}%
681         {\XeTeXcharclass\FB@char=\FB@punctthin}%
682     \XeTeXinterchartoks \FB@stdchar \FB@punctthin = {%
683         \iffB@spacing\ifhmode\FDP@thinspace\fi\fi}%
684     \XeTeXinterchartoks \FB@guilf \FB@punctthin = {%
685         \iffB@spacing\FDP@thinspace\fi}%
686     \XeTeXinterchartoks \FB@nonchar \FB@punctthin = {%
```

```

687      \iffB@spacing
688          \ifhmode
689              \ifdim\lastskip>1sp
690                  \unskip\penalty@M\FBthinspace
691              \else
692                  \FDP@thinspace
693              \fi
694          \fi
695      \fi}%
696      \XeTeXinterchartoks \FB@guilo \FB@stdchar = {%
697          \iffB@spacing\FB@guillspace\fi}%
698      \XeTeXinterchartoks \FB@guilo \FB@nonchar = {%
699          \iffB@spacing\FB@guillspace\ignorespaces\fi}%
700      \XeTeXinterchartoks \FB@stdchar \FB@guilf = {%
701          \iffB@spacing\FB@guillspace\fi}%
702      \XeTeXinterchartoks \FB@punctthin \FB@guilf = {%
703          \iffB@spacing\FB@guillspace\fi}%
704      \XeTeXinterchartoks \FB@nonchar \FB@guilf = {%
705          \iffB@spacing\unskip\FB@guillspace\fi}%
706      }
707      \addto\extrasfrench{\FB@xetex@punct@french}

```

End of specific code for punctuation with modern XeTeX engines.

```
708 \fi
```

2.2.3 Punctuation with standard (pdf)TeX

In standard (pdf)TeX we need to make the four characters ; ! ? and : ‘active’ and provide their definitions. Before doing so, we have to save some definitions involving ::.

```

709 \newif\iffB@koma
710 \ifLaTeXe
711     \@ifclassloaded{scrartcl}{\FB@komatrue}{}%
712     \@ifclassloaded{scrbook}{\FB@komatrue}{}%
713     \@ifclassloaded{scrreprt}{\FB@komatrue}{}%
714     \iffB@koma\def\FB@std@capsep{:\ } \fi
715     \@ifclassloaded{beamer}{\def\FB@std@capsep{:\ }}{}%
716     \@ifclassloaded{memoir}{\def\FB@std@capsep{:\ }}{}%
717 \fi
718 \iffB@active@punct
719     \initiate@active@char{::}%
720     \initiate@active@char{;}%
721     \initiate@active@char{!}%
722     \initiate@active@char{?}%

```

We first tune the amount of space before ; ! ? and ::. This should only happen in horizontal mode, hence the test \ifhmode.

In horizontal mode, if a space has been typed before ‘;’ we remove it and put a non-breaking \FBthinspace instead. If no space has been typed, we add \FDP@thinspace which will be defined, up to the user’s wishes, as a non-breaking \FBthinspace or as \@empty.

```
723 \declare@shorthand{french}{}{}%
```

```

724     \ifFB@spacing
725         \ifhmode
726             \ifdim\lastskip>lsp
727                 \unskip\penalty\@M\FBthinspace
728             \else
729                 \FDP@thinspace
730             \fi
731         \fi
732     \fi

```

Now we can insert a ; character.

```
733     \string{}
```

The next three definitions are very similar.

```

734     \declare@shorthand{french}{!}{%
735         \ifFB@spacing
736             \ifhmode
737                 \ifdim\lastskip>lsp
738                     \unskip\penalty\@M\FBthinspace
739                 \else
740                     \FDP@thinspace
741                 \fi
742             \fi
743         \fi
744         \string!}
745     \declare@shorthand{french}{?}{%
746         \ifFB@spacing
747             \ifhmode
748                 \ifdim\lastskip>lsp
749                     \unskip\penalty\@M\FBthinspace
750                 \else
751                     \FDP@thinspace
752                 \fi
753             \fi
754         \fi
755         \string?}
756     \declare@shorthand{french}{:}{%
757         \ifFB@spacing
758             \ifhmode
759                 \ifdim\lastskip>lsp
760                     \unskip\penalty\@M\FBcolonspace
761                 \else
762                     \FDP@colonspace
763                 \fi
764             \fi
765         \fi
766         \string:}

```

When the active characters appear in an environment where their French behaviour is not wanted they should give an ‘expected’ result. Therefore we define shorthands at system level as well.

```

767     \declare@shorthand{system}{:}{\string:}
768     \declare@shorthand{system}{!}{\string!}
769     \declare@shorthand{system}{?}{\string?}
770     \declare@shorthand{system}{;}{\string;}

```

We specify that the French group of shorthands should be used when switching to French.

```
771 \addto\extrasfrench{\languageshorthands{french}}%
```

These characters are ‘turned on’ once, later their definition may vary. Don’t misunderstand the following code: they keep being active all along the document, even when leaving French.

```
772 \bbl@activate{:\}\bbl@activate{;}\%
773 \bbl@activate{!}\bbl@activate{?}\%
774 }
775 \addto\noextrasfrench{%
776 \bbl@deactivate{:\}\bbl@deactivate{;}\%
777 \bbl@deactivate{!}\bbl@deactivate{?}\%
778 }
779 \fi
```

2.2.4 Punctuation switches common to all engines

A new ‘if’ `\iffBAutoSpacePunctuation` needs to be defined now to control the two possible ways of dealing with ‘high punctuation’. its default value is true, but it can be set to false by `\frenchsetup{AutoSpacePunctuation=false}` for finer control.

```
780 \newif\iffBAutoSpacePunctuation \FBAutoSpacePunctuationtrue
```

`\AutoSpaceBeforeFDP` `\autospace@beforeFDP` and `\noautospace@beforeFDP` are internal commands. `\NoAutoSpaceBeforeFDP` `\autospace@beforeFDP` defines `\FDP@thinspace` and `\FDP@colonspace` as non-breaking spaces and sets LuaTeX attribute `\FB@addDPspace` to 1 (true), while `\noautospace@beforeFDP` lets these spaces empty and sets flag `\FB@addDPspace` to 0 (false). User commands `\AutoSpaceBeforeFDP` and `\NoAutoSpaceBeforeFDP` do the same and take care of the flag `\iffBAutoSpacePunctuation` in `\TEX`.

Set the default now for Plain (done later for LaTeX).

```
781 \def\autospace@beforeFDP{%
782 \iffB@luatex@punct \FB@addDPspace=\@ne \fi
783 \def\FDP@thinspace{\penalty@\M\FBthinspace}%
784 \def\FDP@colonspace{\penalty@\M\FBcolonspace}%
785 \def\noautospace@beforeFDP{%
786 \iffB@luatex@punct \FB@addDPspace=\z@ \fi
787 \let\FDP@thinspace\@empty
788 \let\FDP@colonspace\@empty
789 \ifLaTeXe

798 \AutoSpaceBeforeFDP
799 \fi
```

`\rmfamilyFB` In LaTeX2e `\ttfamily` (and hence `\texttt`) will be redefined ‘`AtBeginDocument`’ as `\sffamilyFB` `\ttfamilyFB` so that no space is added before the four ; : ! ? characters, even if `\ttfamilyFB`

`\AutoSpacePunctuation` is `true`. When `\AutoSpacePunctuation` is `false`, the eventually typed spaces are left unchanged (not turned into thin spaces, no penalty added). `\rmfamily` and `\sffamily` need to be redefined also (`\ttfamily` is not always used inside a group, its effect can be cancelled by `\rmfamily` or `\sffamily`).

These redefinitions can be canceled if necessary, for instance to recompile older documents, see option `OriginalTypewriter` below.

To be consistent with what is done for the ; : ! ? characters, `\ttfamilyFB` also switches off insertion of spaces inside French guillemets *when they are typed in as characters* with the ‘og’/‘fg’ options in `\frenchsetup{}`. This is also a workaround for the weird behaviour of these characters in verbatim mode.

```
800 \ifLaTeXe
801   \DeclareRobustCommand\ttfamilyFB{\FB@spacing@off \ttfamilyORI}
802   \DeclareRobustCommand\rmfamilyFB{\FB@spacing@on  \rmfamilyORI}
803   \DeclareRobustCommand\sffamilyFB{\FB@spacing@on  \sffamilyORI}
804 \fi
```

`\NoAutoSpacing` The following command disables automatic spacing for high punctuation and French quote characters; it also switches off active punctuation characters (if any). It is engine independent (works for TeX, LuaTeX and XeTeX based engines) and is meant to be used inside a group.

```
805 \DeclareRobustCommand*\{\NoAutoSpacing\}{%
806   \FB@spacing@off
807   \ifFB@active@punct\shorthandoff{;!:!?\}\fi
808 }
```

2.3 Commands for French quotation marks

`\guillemotleft` pdfLaTeX users are supposed to use 8-bit output encodings (T1, LY1,...) to typeset `\guillemotright` French, those who still stick to OT1 should load `aeguill` or a similar package. In both `\textquotedblleft` cases the commands `\guillemotleft` and `\guillemotright` will print the French `\textquotedblright` opening and closing quote characters from the output font. For XeLaTeX and LuaLaTeX, `\guillemotleft` and `\guillemotright` are defined by package `fontspec` (v. 2.5d and up).

We provide the following definitions for non-LaTeX users only as fall-back, they are welcome to change them for anything better.

```
809 \ifLaTeXe
810 \else
811   \ifFBunicode
812     \def\guillemotleft{{\char"00AB}}
813     \def\guillemotright{{\char"00BB}}
814     \def\textquotedblleft{{\char"201C}}
815     \def\textquotedblright{{\char"201D}}
816   \else
817     \def\guillemotleft{\leavevmode\raise0.25ex
818                           \hbox{\$scriptscriptstyle ll\$}}
819     \def\guillemotright{\raise0.25ex
820                           \hbox{\$scriptscriptstyle gg\$}}
821     \def\textquotedblleft{'`'}
822     \def\textquotedblright{''}
823 \fi
```

```

824 \let\xspace\relax
825 \fi
```

\FBgspchar The next step is to provide correct spacing after ‘‘ and before ’’; no line break is
 \FB@og allowed neither *after* the opening one, nor *before* the closing one. French quotes
 \FB@fg (including spacing) are printed by \FB@og and \FB@fg, the expansion of the top level
 commands \og and \fg is different in and outside French.

\FB@og and \FB@fg are now designed to work in bookmarks.

```

826 \providecommand\texorpdfstring[2]{#1}
827 \newcommand*\FB@og{\texorpdfstring{@}{\FB@og}\guillemotleft\xspace}
828 \newcommand*\FB@fg{\texorpdfstring{@}{\FB@fg}\space\guillemotright}
```

The internal definitions \@FB@og and \@FB@fg need some engine-dependent tuning:
 for LuaTeX, \FB@spacing is set to 0 locally to prevent the quotes characters from
 adding space when option **og=«, fg=»** is set.

```

829 \newcommand*\FB@guillspace{\penalty@M\FBguillspace}
830 \newcommand*\FBgspchar{\char"A0\relax}
831 \newif\iffBucsNBSP
832 \iffB@luatex@punct
833 \DeclareRobustCommand*\FB@og{\leavevmode
834   \bgroup\FB@spacing=\z@\guillemotleft\egroup
835   \iffBucsNBSP\FBgspchar\else\FB@guillspace\fi}
836 \DeclareRobustCommand*\FB@fg{\ifdim\lastskip>\z@\unskip\fi
837   \iffBucsNBSP\FBgspchar\else\FB@guillspace\fi
838   \bgroup\FB@spacing=\z@\guillemotright\egroup}
839 \fi
```

With XeTeX, \iffB@spacing is set to false locally for the same reason.

```

840 \iffB@xetex@punct
841 \DeclareRobustCommand*\FB@og{\leavevmode
842   \bgroup\FB@spacingfalse\guillemotleft\egroup
843   \FB@guillspace}
844 \DeclareRobustCommand*\FB@fg{\ifdim\lastskip>\z@\unskip\fi
845   \FB@guillspace
846   \bgroup\FB@spacingfalse\guillemotright\egroup}
847 \fi
848 \iffB@active@punct
849 \DeclareRobustCommand*\FB@og{\leavevmode
850   \guillemotleft
851   \FB@guillspace}
852 \DeclareRobustCommand*\FB@fg{\ifdim\lastskip>\z@\unskip\fi
853   \FB@guillspace
854   \guillemotright}
855 \fi
```

\og The user level macros for quotation marks are named \og (“ouvrez guillemets”) and
 \fg \fg (“fermez guillemets”). Another option for typesetting quotes in French is to use
 the command \frquote (see below). Dummy definition of \og and \fg just to ensure
 that this commands are not yet defined.

```

856 \newcommand*\og{\emptyset}
857 \newcommand*\fg{\emptyset}
```

The definitions of \og and \fg for quotation marks are switched on and off through the \extrasfrench \noextrasfrench mechanism. Outside French, \og and \fg will typeset standard English opening and closing double quotes. We'll try to be smart to users of David Carlisle's xspace package: if this package is loaded there will be no need for {} or _ to get a space after \fg, otherwise \xspace will be defined as \relax (done at the end of this file).

```

858 \ifLaTeXe
859   \def\bbbl@frenchguillemets{%
860     \renewcommand*\{\og}{\FB@og}%
861     \renewcommand*\{\fg}{\FB@fg\xspace}%
862   \renewcommand*\{\og}{\textquotedblleft}%
863   \renewcommand*\{\fg}{\ifdim\lastskip>\z@\unskip\fi
864     \textquotedblright\xspace}%
865 \else
866   \def\bbbl@frenchguillemets{\let\og\FB@og
867     \let\fg\FB@fg}%
868   \def\og{\textquotedblleft}%
869   \def\fg{\ifdim\lastskip>\z@\unskip\fi\textquotedblright}%
870 \fi

871 \addto\extrasfrench{\babel@save\og \babel@save\fg
872           \bbbl@frenchguillemets}

```

\frquote Another way of entering French quotes relies on \frquote{} with supports up to two levels of quotes. Let's define the default quote characters to be used for level one or two of quotes...

```

873 \newcommand*\{\ogi}{\FB@og}
874 \newcommand*\{\fgi}{\FB@fg}
875 \newcommand*\{\@ogi}{\ifmmode\hbox{\ogi}\else\ogi\fi}
876 \newcommand*\{\@fgi}{\ifmmode\hbox{\fgi}\else\fgi\fi}
877 \newcommand*\{\ogii}{\textquotedblleft}
878 \newcommand*\{\fgii}{\textquotedblright}
879 \newcommand*\{\@ogii}{\ifmmode\hbox{\ogii}\else\ogii\fi}
880 \newcommand*\{\@fgii}{\ifmmode\hbox{\fgii}\else\fgii\fi}

```

and the needed technical stuff to handle options:

```

881 \newcount\FBguill@level
882 \newtoks\FBold@everypar

```

\FB@addquote@everypar was borrowed from csquotes.sty.

```

883 \def\FB@addquote@everypar{%
884   \let\FBnew@everypar\everypar
885   \FBold@everypar=\expandafter{\the\everypar}%
886   \FBnew@everypar={\the\FBold@everypar\FB@everypar@quote}%
887   \let\everypar\FBold@everypar
888   \let\FB@addquote@everypar\relax
889 }
890 \newif\ifFBcloseguill \FBcloseguilltrue
891 \newif\iffBInnerGuillSingle
892 \def\FBguillopen{\bgroup\NoAutoSpacing\guillemotleft\egroup}
893 \def\FBguillclose{\bgroup\NoAutoSpacing\guillemotright\egroup}
894 \let\FBguillnone\empty

```

```

895 \let\FBeveryparguill\FBguillopen
896 \let\FBeverylanguill\FBguillnone
897 \let\FBeverypar@quote\relax
898 \let\FBeveryline@quote\empty

```

The main command `\frquote` accepts (in LaTeX2e only) a starred version which suppresses the closing quote; it is meant to be used for inner quotations which end together with the outer one, then only one closing guillemet (the outer one) should be printed. `\frquote` (without star) is now designed to work in bookmarks too.

```

899 \ifLaTeXe
900   \DeclareRobustCommand\frquote{%
901     \texorpdfstring{@ifstar{\FBcloseguillfalse\fr@quote}{%
902       {\FBcloseguilltrue \fr@quote}}}{%
903       {\bm@fr@quote}}}
904   }
905   \newcommand{\bm@fr@quote}[1]{%
906     \guillemotleft\space #1\space\guillemotright}
907 \else
908   \newcommand\frquote[1]{\fr@quote{#1}}
909 \fi

```

The internal command `\fr@quote` takes one (long) argument: the quotation text.

```

910 \newcommand{\fr@quote}[1]{%
911   \leavevmode
912   \advance\FBguill@level by \@ne
913   \ifcase\FBguill@level
914     \or

```

This for level 1 (outer) quotations: set `\FBeverypar@quote` for level 1 quotations and add it to `\everypar` using `\FB@addquote@everypar`, then print the quotation:

```

915   \ifx\FBeveryparguill\FBguillnone
916   \else
917     \def\FBeverypar@quote{\FBeveryparguill\FB@guillspace}%
918     \FB@addquote@everypar
919   \fi
920   \@ogi #1\@fgi
921   \or

```

This for level 2 (inner) quotations: Omega's command `\localleftbox` included in LuaTeX, is convenient for repeating guillemets at the beginning of every line.

```

922   \ifx\FBeverylanguill\FBguillopen
923     \def\FBeveryline@quote{\FB@addGUILspace=\z@
924                               \guillemotleft\FBguillspace}%
925     \localleftbox{\FBeveryline@quote}%
926     \let\FBeverypar@quote\relax
927     \@ogi #1\iffBcloseguill\@fgi\fi
928   \else
929     \ifx\FBeverylanguill\FBguillclose
930       \def\FBeveryline@quote{\FB@addGUILspace=\z@
931                               \guillemotright\FBguillspace}%
932       \localleftbox{\FBeveryline@quote}%
933       \let\FBeverypar@quote\relax
934       \@ogi #1\iffBcloseguill\@fgi\fi
935   \else

```

otherwise we need to redefine \FBeverypar@quote (and eventually \ogii, \fgii) for level 2 quotations:

```

936      \let\FBeverypar@quote\relax
937      \ifFBInnerGuillSingle
938          \def\ogii{\leavevmode
939              \guilsinglleft\FB@guillspace}%
940          \def\fgii{\ifdim\lastskip>\z@\unskip\fi
941              \FB@guillspace\guilsinglright}%
942          \ifx\FBeveryparguill\FBguillopen
943              \def\FBeverypar@quote{\guilsinglleft\FB@guillspace}%
944          \fi
945          \ifx\FBeveryparguill\FBguillclose
946              \def\FBeverypar@quote{\guilsinglright\FB@guillspace}%
947          \fi
948          \fi
949          \ogii #1\iffBcloseguill \@fgii \fi
950      \fi
951  \fi
952 \else

```

Warn if \FBguill@level > 2:

```

953  \ifx\PackageWarning\undefined
954      \fb@warning{\noexpand\frquote\space handles up to
955                  two levels.\` Quotation not printed.}%
956  \else
957      \PackageWarning{french.ldf}{%
958          \protect\frquote\space handles up to two levels.
959          \MessageBreak Quotation not printed. Reported}
960  \fi
961 \fi

```

Closing: step down \FBguill@level and clean on exit. Changes made global in case \frquote{} ends inside an environment.

```

962  \global\advance\FBguill@level by \m@ne
963  \ifcase\FBguill@level \global\let\FBeverypar@quote\relax
964  \or \gdef\FBeverypar@quote{\FBeveryparguill\FB@guillspace}%
965      \global\let\FBeveryline@quote\empty
966      \ifx\FBeverylineguill\FBguillnone\else\localleftbox{}\fi
967  \fi
968 }

```

The next command is intended to be used in list environments to suppress quotes which might be added by \FBeverypar@quote after items for instance.

```
969 \newcommand*{\NoEveryParQuote}{\let\FBeveryparguill\FBguillnone}
```

2.4 Date in French

\frenchtoday The following code creates a macro \datefrench which in turn defines command \frenchdate \frenchtoday (\today is defined as \frenchtoday in French). The corresponding \datefrench commands for the French dialect, \dateacadian and \acadiantoday are also created btw. This new implementation relies on commands \SetString and \SetStringLoop, therefore requires Babel 3.10 or newer.

Explicitly defining `\BabelLanguages` as the list of all French dialects defines *both* `\datefrench` and `\dateacadian`; this is required as `french.ldf` is read only once even if both language options `french` and `acadian` are supplied to Babel. Coding `\StartBabelCommands*{\french,acadian}` would *only* define `\date\CurrentOption`, leaving the second language undefined in Babel's sens.

```

970 \def\BabelLanguages{french,acadian}
971 \StartBabelCommands*{\BabelLanguages}{date}
972     [unicode, fontenc=TU EU1 EU2, charset=utf8]
973     \SetString\monthiiname{février}
974     \SetString\monthviiiname{août}
975     \SetString\monthxiiname{décembre}
976 \StartBabelCommands*{\BabelLanguages}{date}
977     \SetStringLoop{month#1name}{%
978         janvier,f\'evrier,mars,avril,mai,juin,juillet,%
979         ao\^ut,septembre,octobre,novembre,d\'ecembre}
980     \SetString\today{\FB@date{\year}{\month}{\day}}
981 \EndBabelCommands

\frenchdate (which produces an unbreakable string) and \frentchtoday (breakable)
both rely on \FB@date, the inner group is needed for \hbox.

982 \newcommand*{\FB@date}[3]{%
983     {{\number#3}\ifnum1=#3{\ier}\fi\FBdatespace
984     \csname month\romannumeral#2name\endcsname
985     \ifx#1@\empty\else\FBdatespace\number#1\fi}}
986 \newcommand*{\FBdatebox}[\hbox]
987 \newcommand*{\FBdatespace}{\space}
988 \newcommand*{\frenchdate}{\FBdatebox\FB@date}
989 \newcommand*{\acadiandate}{\FBdatebox\FB@date}

```

2.5 Extra utilities

Let's provide the French user with some extra utilities.

`\up` `\up` eases the typesetting of superscripts like '1^{er}'. Up to version 2.0 of babel-`\fup` `french` `\up` was just a shortcut for `\textsuperscript` in LaTeX2e, but several users complained that `\textsuperscript` typesets superscripts too high and too big, so we now define `\fup` as an attempt to produce better looking superscripts. `\up` is defined as `\fup` but `\frenchsetup{FrenchSuperscripts=false}` redefines `\up` as `\textsuperscript` for compatibility with previous versions.

When a font has built-in superscripts, the best thing to do is to just use them, otherwise `\fup` has to simulate superscripts by scaling and raising ordinary letters. Scaling is done using package `scalefnt` which will be loaded at the end of Babel's loading (`babel-french` being an option of Babel, it cannot load a package while being read).

```

990 \newif\iffB@poorman
991 \newdimen\FB@Mht
992 \ifLaTeXe
993   \AtEndOfPackage{\RequirePackage{scalefnt}}

```

`\FB@up@fake` holds the definition of fake superscripts. The scaling ratio is 0.65, raising is computed to put the top of lower case letters (like 'm') just under the top of upper case letters (like 'M'), precisely 12% down. The chosen settings look correct for most

fonts, but can be tuned by the end-user if necessary by changing \FBsupR and \FBsupS commands.

\FB@lc is defined as \MakeLowercase to inhibit the uppercasing of superscripts (this may happen in page headers with the standard classes but is wrong); \FB@lc can be re-defined to do nothing by option `LowercaseSuperscripts=false` of \frenchsetup{}.

```

994  \newcommand*\{\\FBsupR}{-0.12}
995  \newcommand*\{\\FBsupS}{0.65}
996  \newcommand*\{\FB@lc}[1]{\\MakeLowercase{#1}}
997  \DeclareRobustCommand*\{\FB@up@fake}[1]{%
998    \\settoheight{\\FB@Mht}{M}%
999    \\addtolength{\\FB@Mht}{\\FBsupR \\FB@Mht}%
1000   \\addtolength{\\FB@Mht}{-\\FBsupS ex}%
1001   \\raisebox{\\FB@Mht}{\\scalefont{\\FBsupS}{\\FB@lc{#1}}}}%
1002 }
```

The only packages I currently know to take advantage of real superscripts are a) `realscripts` used in conjunction with XeLaTeX or LuaLaTeX and OpenType fonts having the font feature 'VerticalPosition=Superior' and b) `fourier` (from version 1.6) when Expert Utopia fonts are available.

\FB@up checks whether the current font is a Type1 'Expert' (or 'Pro') font with real superscripts or not (the code works currently only with `fourier-1.6` but could work with any Expert Type1 font with built-in superscripts, see below), and decides to use real or fake superscripts. It works as follows: the content of \f@family (family name of the current font) is split by \FB@split into two pieces, the first three characters ('fut' for Fourier, 'ppl' for Adobe's Palatino, ...) stored in \FB@firstthree and the rest stored in \FB@suffix which is expected to be 'x' or 'j' for expert fonts.

```

1003 \def\\FB@split#1#2#3#4@nil{\\def\\FB@firstthree{#1#2#3}%
1004                                \\def\\FB@suffix{#4}}
1005 \\def\\FB@x{x}
1006 \\def\\FB@j{j}
1007 \\DeclareRobustCommand*\{\FB@up}[1]{%
1008   \\bgroup \\FB@poormantrue
1009     \\expandafter\\FB@split\\f@family@nil
```

Then \FB@up looks for a .fd file named `t1fut-sup.fd` (Fourier) or `t1ppl-sup.fd` (Palatino), etc. supposed to define the subfamily (fut-sup or ppl-sup, etc.) giving access to the built-in superscripts. If the .fd file is not found by \IfFileExists, \FB@up falls back on fake superscripts, otherwise \FB@suffix is checked to decide whether to use fake or real superscripts.

```

1010 \\edef\\reserved@a{\\lowercase{%
1011   \\noexpand\\IfFileExists{\\f@encoding\\FB@firstthree -sup.fd}}}{%
1012 \\reserved@a
1013   {\\ifx\\FB@suffix\\FB@x \\FB@poormanfalse\\fi
1014     \\ifx\\FB@suffix\\FB@j \\FB@poormanfalse\\fi
1015     \\iffB@poorman \\FB@up@fake{#1}%
1016     \\else \\FB@up@real{#1}%
1017     \\fi}%
1018   {\\FB@up@fake{#1}}%
1019 }
```

\FB@up@real just picks up the superscripts from the subfamily (and forces lowercase).

```

1020 \\newcommand*\{\FB@up@real}[1]{\\bgroup
1021   \\fontfamily{\\FB@firstthree -sup}\\selectfont \\FB@lc{#1}\\egroup}
```

\fup is defined as \FB@up unless \realsuperscript is defined by `realscripts.sty`.
\fup just prints its argument in bookmarks.

```
1022  \DeclareRobustCommand*{\fup}[1]{%
1023    \texorpdfstring{\ifx\realsuperscript\undefined
1024      \FB@up{\#1}%
1025    \else
1026      \bgroup\let\fakesuperscript\FB@up@fake
1027      \realsuperscript{\FB@lc{\#1}}\egroup
1028    \fi
1029  }{\#1}%
1030 }
```

Let's provide a temporary definition for \up (redefined 'AtBeginDocument' as \fup or \textsuperscript according to \frenchsetup{} options).

```
1031 \providecommand*{\up}{\fup}
```

Poor man's definition of \up for Plain.

```

\bname These commands are meant to easily enter family names (in small capitals for the **\bsc** latter) while avoiding hyphenation. A **\kern0pt** is used instead of **\mbox** because **\mbox** would break microtype's font expansion; as a positive side effect, composed names (such as Dupont-Durand) can now be hyphenated on explicit hyphens.

```

1063 \ifLaTeXe
1064   \DeclareRobustCommand*{\bname}[1]{%

1090 \newcommand*{\at}{@}

```

\degrees We now define a macro **\degrees** for typesetting the abbreviation for 'degrees' (as in 'degrees Celsius'). As the bounding box of the character 'degree' has very different widths in CM/EC and PostScript fonts, we fix the width of the bounding box of **\degrees**

to 0.3 em, this lets the symbol ‘degree’ stick to the preceding (e.g., `45\degrees`) or following character (e.g., `20~\degrees C`). `\degrees` works in math-mode (angles). If `\TeX` Companion fonts are available (`textcomp.sty`), we pick up `\textdegree` from them instead of emulating ‘degrees’ from the `\r{}` accent. Otherwise we advise the user (once only) to use TS1-encoding.

```

2.6 Formatting numbers

`\StandardMathComma` As mentioned in the `\TeXbook` p. 134, the comma is of type `\mathpunct` in math mode:
`\DecimalMathComma` it is automatically followed by a thin space. This is convenient in lists and intervals but unpleasant when the comma is used as a decimal separator in French: it has to be entered as `{,}`. `\DecimalMathComma` makes the comma be an ordinary character (of type `\mathord`) in French (or Acadian) *only* (no space added); `\StandardMathComma` switches back to the standard behaviour of the comma.
Unfortunately, `\newcount` inside `\if` breaks Plain formats.

```

1114 \newif\iffB@icomma
1115 \newcount\mc@charclass

```

`nombre` We redefine `\nombre` for LaTeXe. The command `\nombre` is now borrowed from `numprint.sty` for LaTeXe. There is no point to maintain the former tricky code when a package is dedicated to do the same job and more. A warning is issued at the first call of `\nombre` if `\numprint` is not defined, suggesting what to do. The package `numprint` is *not* loaded automatically by `babel-french` because of possible options conflict.

```

1223 \renewcommand*{\nombre}[1]{\Warning@nombre{#1}}

1309   \fi
1310 \fi
1311 }

```

2.8 Figure and table captions

\FBWarning \FBWarning is an alias of \PackageWarning{french.ldf} which can be made silent by option **SuppressWarning**.

```
1312 \newcommand{\FBWarning}[1]{\PackageWarning{french.ldf}{#1}}
```

\CaptionSeparator Let's consider now captions in figures and tables. In French, captions in figures and tables should never be printed as 'Figure 1:' which is the default in standard LaTeX2e classes (a space should precede the colon in French). This flaw may occur with pdfLaTeX as ':' is made active too late. With LuaTeX and XeTeX, this glitch doesn't occur, you get 'Figure 1 :' which is correct in French. With pdfTeX babel-french provides the following workaround.

The standard definition of \@makecaption (e.g., the one provided in article.cls, report.cls, book.cls which is frozen for LaTeX2e according to Frank Mittelbach), is saved in \STD@makecaption. 'AtBeginDocument' we compare it to its current definition (some classes like memoir, koma-script classes, AMS classes, ua-thesis.cls... change it). If they are identical, babel-french just adds a hook called \FBCaption@Separator to \@makecaption; \FBCaption@Separator defaults to ':' as in the standard \@makecaption and will be changed to ':' in French 'AtBeginDocument'; it can be also set to \CaptionSeparator ('-') using **CustomiseFigTabCaptions**.

While saving the standard definition of \@makecaption we have to make sure that characters ':' and '>' have \catcode 12 (babel-french makes ':' active and spanish.ldf makes '>' active).

```

1313 \bgroup
1314   \catcode`:=12 \catcode`>=12 \relax
1315   \long\gdef\STD@makecaption#1#2{%
1316     \vskip\abovecaptionskip
1317     \sbox\@tempboxa{#1: #2}%
1318     \ifdim \wd\@tempboxa >\hsize
1319       #1: #2\par

```

```

1320     \else
1321         \global \@minipagefalse
1322         \hb@xt@\hsize{\hfil\box@\tempboxa\hfil}%
1323     \fi
1324     \vskip\belowcaptionskip}
1325 \egroup

```

No warning is issued for SMF and AMS classes as their layout of captions is compatible with French typographic standards.

With memoir and koma-script classes, babel-french customises \captiondelim or \captionformat in French (unless option `CustomiseFigTabCaptions` is set to `false`) and issues no warning.

When \makecaption has been changed by another class or package, a warning is printed in the .log file.

Enable the standard warning only if high punctuation is active.

```

1381   \let\STD@makecaption\relax
1382 }

```

2.9 Dots...

`\FBtextellipsis` Unless a ready-made character is available in the current font, LaTeX’s default definition of `\textellipsis` includes a `\kern` at the end; this space is not wanted in some cases (before a closing brace for instance) and `\kern` breaks hyphenation of the next word. We define `\FBtextellipsis` for French (in LaTeX only) the same way but without the last `\kern`.

LY1 has a ready made character for \textellipsis, it should be used in French. The same is true for Unicode fonts in use with XeTeX and LuaTeX.

```

1383 \ifFBunicode
1384 \else
1385   \DeclareTextSymbol{\FBtextellipsis}{LY1}{133}
1386   \DeclareTextCommand{\FBtextellipsis}{PU}{\textellipsis}
1387   \DeclareTextCommand{\FBtextellipsis}{PD1}{\textellipsis}
1388   \DeclareTextCommandDefault{\FBtextellipsis}{%
1389     .\kern\fontdimen3\font.\kern\fontdimen3\font.\xspace}%
1390   \def\bbl@frenchdots{\babel@save{textellipsis}%
1391                         \let{textellipsis}\FBtextellipsis}
1392   \addto\extrasfrench{\bbl@frenchdots}
1393 \fi

```

2.10 More checks about packages' loading order

Like packages captions and floatrow (see section 2.8), package listings should be loaded after babel-french due to active characters issues (pdfLaTeX only).

```

1394 \ifFB@active@punct
1395   \@ifpackageloaded{listings}%
1396   { \AtBeginDocument{%
1397     \FBWarning{Please load the "listings" package\MessageBreak
1398               AFTER babel/french; reported}}%
1399   }{}%
1400 \fi

```

Package natbib should be loaded before babel-french due to active characters issues (pdfLaTeX only).

```

1401 \newif\if@FBwarning@natbib
1402 \ifFB@active@punct
1403   \@ifpackageloaded{natbib}{}{\@FBwarning@natbibtrue}%
1404 \fi
1405 \AtBeginDocument{%
1406   \if@FBwarning@natbib
1407     \@ifpackageloaded{natbib}{}{\@FBwarning@natbibfalse}%
1408   \fi
1409   \if@FBwarning@natbib
1410     \FBWarning{Please load the "natbib" package\MessageBreak
1411               BEFORE babel/french; reported}}%
1412 \fi
1413 }

```

Package beamerarticle should be loaded before babel-french to avoid list's conflicts, see p. 55.

```

1414 \newif\if@FBwarning@beamerarticle
1415 \@ifpackageloaded{beamerarticle}{}{\@FBwarning@beamerarticletrue}%
1416 \AtBeginDocument{%

1423             BEFORE babel/french; reported}%
1424     \fi
1425 }
```

2.11 Setup options: keyval stuff

All setup options are handled by command `\frenchsetup{}` using the keyval syntax. A list of flags is defined and set to a default value which will possibly be changed 'AtEndOfPackage' if French is the main language. After this, `\frenchsetup{}` eventually modifies the preset values of these flags.

Option processing can occur either in `\frenchsetup{}`, but *only for options explicitly set by `\frenchsetup{}`*, or 'AtBeginDocument'; any option affecting `\extrasfrench{}` *must* be processed by `\frenchsetup{}`: when French is the main language, `\extrasfrench{}` is executed by Babel when it switches the main language and this occurs *before* reading the stuff postponed by babel-french 'AtBeginDocument'. Reexecuting `\extrasfrench{}` is an option which was used up to v2.6h, it has been dropped in v3.0a because of its side-effects (f.i. `\babel@save` and `\babel@savevariable` did not work for French).

`\frenchsetup` Let's now define this command which reads and sets the options to be processed either immediately (i.e. just after setting the key) or later (at `\begin{document}`) by `\FBprocess@options`. `\frenchsetup{}` can only be called in the preamble.

```

1426 \newcommand*{\frenchsetup}[1]{%
1427   \setkeys{FB}{#1}%
1428 }%
1429 @onlypreamble\frenchsetup
```

Keep the former name `\frenchbsetup` working for compatibility.

```

1430 \let\frenchbsetup\frenchsetup
1431 @onlypreamble\frenchbsetup
```

We define a collection of conditionals with their defaults (true or false).

The defaults values of these flags have been chosen so that `babel-french` does not change anything regarding the global layout. `\bbl@main@language`, set by the last option of `Babel`, controls the global layout of the document. ‘`AtEndOfPackage`’ we check the main language in `\bbl@main@language`; if it is French (or a French dialect) the values of some flags have to be changed to ensure a French looking layout for the whole document (even in parts written in languages other than French); the end-user will then be able to customise the values of all these flags with `\frenchsetup{}`. The following patch is for `koma-script` classes: the `\partformat` command, defined as `\partname~\thepart\autodot`, is incompatible with our redefinition of `\partname`.

```

1458 \iffB@koma
1459   \ifdefined\partformat
1460     \def\FB@partformat@fix{%
1461       \iffBPartNameFull
1462         \babel@save\partformat
1463         \renewcommand*\{\partformat}{\partname}%
1464       \fi}
1465     \addto\extrasfrench{\FB@partformat@fix}%
1466   \fi
1467 \fi

```

Our list customisation conflicts with the `beamer` class and with the `beamerarticle` package. The patch provided in `beamerbasecompatibility` solves the conflict except in case of language changes, so we provide our own patch. When the `beamer` is loaded, lists are not customised at all to ensure compatibility. The `beamerarticle` package needs to be loaded *before* `Babel`, a warning is issued otherwise, see section 2.10; a light customisation is compatible with the `beamerarticle` package.

```

1468 \def\FB@french{french}
1469 \def\FB@acadian{acadian}
1470 \newif\iffB@mainlanguage@FR
1471 \AtEndOfPackage{%

Inputting French quotes as *single characters* when they are available on the keyboard

(through a compose key for instance) is more comfortable than typing \og and \fg. Life is simple here with modern LuaTeX or XeTeX engines: we just have to activate the \FB@addGUILspace attribute for LuaTeX or set \XeTeXcharclass of quotes to the proper value for XeTeX.

With pdfTeX (or old LuaTeX and XeTeX engines), quote characters are made active and expand to \og\ignorespaces and {\fg} respectively if the current language is French, and to \guillemotleft and \guillemotright otherwise (think of German quotes), this is done by \FB@@og and \FB@@fg; thus correct non-breaking spaces will be added automatically to French quotes. The quote characters typed in depend on the input encoding, it can be single-byte (latin1, latin9, applemac,...) or multi-bytes (utf-8, utf8x); the next command is meant for checking whether a character is single-byte (\FB@second is empty) or not.

```
1683 \def\FB@parse#1#2\endparse{\def\FB@second{#2}}%
1684 \define@key{FB}{og}{%
1685   \iffBunicode
```

LuaTeX or XeTeX in use, first try modern LuaTeX: we just need to set LuaTeX's attribute \FB@addGUILspace to 1,

```
1686   \iffB@luatex@punct
1687     \FB@addGUILspace=1 \relax
1688   \fi
```

then with XeTeX it is a bit more tricky:

```
1689   \iffB@xetex@punct
```

\XeTeXinterchartokenstate is defined, we just need to set \XeTeXcharclass to \FB@guilo for the French opening quote in T1 and Unicode encoding (see subsection 2.2).

```
1690   \XeTeXcharclass"13 = \FB@guilo
1691   \XeTeXcharclass"AB = \FB@guilo
1692   \XeTeXcharclass"A0 = \FB@guilnul
1693   \XeTeXcharclass"202F = \FB@guilnul
1694   \fi
```

Issue a warning with older Unicode engines requiring active characters.

```

\FBprocess@options \FBprocess@options will be executed at \begin{document}: it first checks about packages loaded in the preamble (possibly after Babel) which customise lists: currently enumitem, paralist and enumerate; then it processes the options as set by \frenchsetup{} or forced for compatibility with packages loaded in the preamble. When French is the main language, \extrasfrench and \captionsfrench have already been processed by Babel at \begin{document} before \FBprocess@options.

1775 \newcommand*\FBprocess@options{%

Update flags if a package customising lists has been loaded, currently: enumitem, paralist, enumerate.

```

2.12 French lists

\listFB Vertical spacing in lists should be shorter in French texts than the defaults provided \listORI by LaTeX. Note that the easy way, just changing values of vertical spacing parameters \FB@listVsettings when entering French and restoring them to their defaults on exit would not work; so we define the command \FB@listVsettings to hold the settings to be used by the French variant \listFB of \list. Note that switching to \listFB reduces vertical spacing in *all* environments built on \list: itemize, enumerate, description, but also abstract, quotation, quote and verse...

The amount of vertical space before and after a list is given by \topsep + \parskip (+ \partopsep if the list starts a new paragraph). IMHO, \parskip should be added *only* when the list starts a new paragraph, so I subtract \parskip from \topsep and add it back to \partopsep; this will normally make no difference because \parskip's default value is Opt, but will be noticeable when \parskip is *not* null.

```

1971 \let\listORI\list
1972 \let\endlistORI\endlist
1973 \newdimen\FB@parskip
1974 \def\FB@listVsettings{%
1975   \setlength{\topsep}{0.8ex plus 0.4ex minus 0.4ex}%
1976   \setlength{\partopsep}{0.4ex plus 0.2ex minus 0.2ex}%
}

```

\parskip is of type 'skip', its mean value only (*not the glue*) should be subtracted from \topsep and added to \partopsep, so convert \parskip to a 'dimen' using \FB@parskip.

```

1977   \FB@parskip=\parskip
1978   \addtolength{\topsep}{-\FB@parskip}%
1979   \addtolength{\partopsep}{\FB@parskip}%
1980   \setlength{\itemsep}{0.4ex plus 0.2ex minus 0.2ex}%
1981   \setlength{\parsep}{0.4ex plus 0.2ex minus 0.2ex}%
}

```

(v3.5q) If \parskip is not null, \parsep is set to \parskip, so paragraphs inside items will be preceded by the same vertical space as paragraphs located outside lists; the vertical skip before items (\itemsep + \parsep) doesn't need to be enlarged.

```

1982   \ifdim\FB@parskip>0pt
1983     \setlength{\parsep}{\FB@parskip}%
1984     \addtolength{\itemsep}{-\FB@parskip}%
1985   \fi
1986 }
1987 \def\listFB#1#2{\listORI{#1}{\FB@listVsettings #2}}
1988 \let\endlistFB\endlistORI

```

Let's now consider French itemize-lists. They differ from those provided by the standard LaTeX classes:

- The '•' is never used in French itemize-lists, an emdash '—' or an endash '‐' is preferred for all levels. The item label to be used in French, stored in

\FrenchLabelItem}, defaults to ‘—’ and can be changed using \frenchsetup{} (see section 2.11).

- Vertical spacing between items, before and after the list, should be *null* with *no glue* added;
- In French the labels of itemize-lists are vertically aligned as shown p. 5.

\FrenchLabelItem Default labels for French itemize-lists (same label for all levels):

```

\frlabelitemi 1989 \newcommand*{\FrenchLabelItem}{\textemdash}
\frlabelitemii 1990 \newcommand*{\frlabelitemi}{\FrenchLabelItem}
\frlabelitemiii 1991 \newcommand*{\frlabelitemii}{\FrenchLabelItem}
\frlabelitemiv 1992 \newcommand*{\frlabelitemiii}{\FrenchLabelItem}
1993 \newcommand*{\frlabelitemiv}{\FrenchLabelItem}
```

\listindentFB Let’s define four dimens \listindentFB, \descindentFB, \labelindentFB and \descindentFB \labelwidthFB to customise lists’ horizontal indentations. They are given silly negative values here in order to eventually enable their customisation in the preamble. \labelwidthFB They will get reasonable defaults later when entering French (see \setlabelitemsFB and \setlistindentFB) unless they have been customised.

```

1994 \newdimen\listindentFB
1995 \setlength{\listindentFB}{-1pt}
1996 \newdimen\descindentFB
1997 \setlength{\descindentFB}{-1pt}
1998 \newdimen\labelindentFB
1999 \setlength{\labelindentFB}{-1pt}
2000 \newdimen\labelwidthFB
2001 \setlength{\labelwidthFB}{-1pt}
```

\leftmarginFB \FB@listHsettings holds the new horizontal settings chosen for French lists itemize, \FB@listHsettings enumerate and description (two possible layouts).

```

2002 \newdimen\leftmarginFB

2135 }

```

If `GlobalLayoutFrench=true`, nothing has to be done at language's switches regarding lists. Otherwise, `\extrasfrench` saves the standard settings for lists and then executes `\update@frenchlists`. In both cases, there is nothing to do for lists in `\noextrasfrench`.

In order to ensure compatibility with packages customising lists, the command `\update@frenchlists` should not be included in the first call to `\extrasfrench` which occurs *before* the relevant flags are finally set, so we define `\FB@ufl` as `\relax`, it will be redefined later 'AtBeginDocument' by `\FBprocess@options` as `\update@frenchlists`, see p. 63.

Lists' layout changes at language switches only if `GlobalLayoutFrench=false`.

```

2136 \def\FB@ufl{\relax}
2137 \def\bbl@frenchlistlayout{%
2138     \ifFBGlobalLayoutFrench

```

2145 \fi
2146 }
2147 \addto\extrasfrench{\bbl@frenchlistlayout}

```

2.13 French indentation of sections

\bbl@frenchindent In French the first paragraph of each section should be indented, this is another difference with US-English. This is controlled by the flag \if@afterindent. Indentation changes at language switches in only two cases:
 a) GlobalLayoutFrench=false,
 b) IndentFirst=true and French isn't the main language.

```

2148 \def\bbl@frenchindent{%
2149   \iffBGlobalLayoutFrench\else\babel@save\@afterindentfalse\fi
2150   \ifFBIndentFirst
2151     \iffB@mainlanguage@FR\else\babel@save\@afterindentfalse\fi
2152     \let\@afterindentfalse\@afterindenttrue
2153     \@afterindenttrue
2154   \fi}
2155 \addto\extrasfrench{\bbl@frenchindent}

```

2.14 Formatting footnotes

The bigfoot package deeply changes the way footnotes are handled. When bigfoot is loaded, we just warn the user that babel-french will not customise footnotes at all. When the footnotebackref package is loaded, babel-french will not customise \@footnotetext in order to keep back referencing working.

The layout of footnotes is controlled by two flags \ifFBAutoSpaceFootnotes and \iffBFrenchFootnotes which are set by options of \frenchsetup{} (see section 2.11). The layout of footnotes *does not depend* on the current language (just think of two footnotes on the same page looking different because one was called in a French part, the other one in English!).

We save the original definition of \@footnotemark at the \begin{document} in order to include any customisation that packages might have done; we define a variant \@footnotemarkFB which just adds a thin space before the number or symbol calling a footnote (any space typed in is removed first). The choice between the two definitions (valid for the whole document) is controlled by flag \ifFBAutoSpaceFootnotes.

```

2156 \AtBeginDocument{%
2157   \@ifpackageloaded{bigfoot}{%
2158     {\PackageWarning{french.ldf}{%
2159       {bigfoot package in use.\MessageBreak
2160       babel-french will NOT customise footnotes;%
2161       \MessageBreak reported}}%
2162     {\let\@footnotemark\@footnotemark
2163      \def\@footnotemarkFB{\leavevmode\unskip\unkern

```

```

2164                               \, \@footnotemark0RI}%
2165           \ifFBAutoSpaceFootnotes
2166               \let\@footnotemark\@footnotemarkFB
2167               \fi}%
2168   \@ifpackageloaded{footnotebackref}{%
2169       {\FBFrenchFootnotesfalse
2170           \PackageWarning{french.ldf}{%
2171               footnotebackref package loaded.\MessageBreak
2172               babel-french will NOT customise footnotes;%
2173               \MessageBreak reported}}%
2174   }%
2175 }

```

\@makefntextFB We then define \@makefntextFB, a variant of \@makefntext which is responsible for the layout of footnotes, to match the specifications of the French ‘Imprimerie Nationale’: footnotes will be indented by \parindentFFN, numbers (if any) typeset on the baseline (instead of superscripts), right aligned on \parindentFFN and followed by a dot and an half quad kern. Whenever symbols are used to number footnotes (as in \thanks for instance), we switch back to the standard layout (the French layout of footnotes is meant for footnotes numbered by arabic or roman digits).

The value of \parindentFFN will be redefined at the \begin{document}, as the maximum of \parindent and 1.5em *unless* it has been set in the preamble (the weird value 10in is just for testing whether \parindentFFN has been set or not).

```

2176 \newdimen\parindentFFN
2177 \parindentFFN=10in

```

\FBfnindent will be set ‘AtBeginDocument’ to the width of the box holding the footnote mark, \dotFFN and \kernFFN (flushed right). It is used by memoir and koma-script classes.

```

2178 \newcommand*\dotFFN{.}
2179 \newcommand*\kernFFN{\kern .5em}
2180 \newdimen\FBfnindent

```

\@makefntextFB’s definition is now tuned according to the document’s class for better compatibility.

Koma-script classes provide \deffootnote, a handy command to customise the footnotes’ layout (see English manual scrguien.pdf); it redefines \@makefntext and @@makefnmark. First, save the original definitions.

```

2181 \ifFB@koma
2182   \let\@makefntext0RI\@makefntext
2183   \let\@makefnmark0RI\@makefnmark

```

\@makefntextFB and @@makefnmarkFB are used when option **FrenchFootnotes** is **true**.

```

2184   \deffootnote[\FBfnindent]{0pt}{\parindentFFN}%
2185           {\thefootnotemark\dotFFN\kernFFN}
2186   \let\@makefntextFB\@makefntext
2187   \let\@makefnmarkFB\@makefnmark

```

\@makefntextTH and @@makefnmarkTH are meant for the \thanks command used by \maketitle when **FrenchFootnotes** is **true**.

```

2188   \deffootnote[\parindentFFN]{0pt}{\parindentFFN}%
2189           {\textsuperscript{\thefootnotemark}}

```

```

2190  \let\@makefntextTH\@makefntext
2191  \let\@makefnmarkTH\@@makefnmark

3 Change History

Changes are listed in reverse order (latest first) and limited to `babel-french v3`.

v3.5s

- General: Footnotes: no customising of
 `\@footnotetext` when the
 `footnotebackref` package is loaded.
 Just warn the user. 72
 `frenchb.lua`: A `:' followed by '-' or a
 ligature should not trigger spacing. 25

v3.5r

- General: Compatibility with
 `ucharclasses` package added. ... 30

v3.5q

- `\listFB`: Bug correction: `\parsep`
 should be related to `\parskip` and
 `\listparindent` to `\parindent`. . 67

v3.5p

- `\DecimalMathComma`:
 `\DecimalMathComma` can again be
 used in the preamble for a global
 action. It now works as expected
 inside a group. 45
 `\frquote`: `\FBeverystyle@quote`: no
 need for a penalty inside a
 `\localleftbox`. 39

v3.5o

- General: `\shorthandon` and
 `\shorthandoff` are no longer
 redefined in LuaTeX (it broke
 `\shorthandoff*`). 29
 `\FB@xetex@punct@french`:
 `\shorthandon` and `\shorthandoff`
 are no longer redefined (it broke
 `\shorthandoff*`). 31
 `frenchb.lua`: Opening guill.: look
 ahead when next is a penalty
 (nobreak space). 27

v3.5n

- `\bbl@frenchindent`:
 `\bbl@frenchindent` changed.
 `\bbl@nonfrenchindent` removed. 72
 `\bsc`: Added command `\bname` (no
 small caps). 44
 `\frenchsetup`:
 `\FBGlobalLayoutFrench` no
 longer set to false when French is
 not the main language. 55

v3.5m

- `\FBtextellipsis`: No longer redefine
 `\dots`, only `\textellipsis`'s

default definition is changed in
 French. 53

v3.5l

- General: No warning about
 `\makecaption` for more classes. 51
 `\captionsfrench`: Redefine
 `\fnum@figure` and `\fnum@table`
 separately. 48

v3.5k

- General: `\degree`, `\degrees`,
 `\circonflexe`, `\tild`, `\boi` and
 `\at` are now safe in bookmarks. . 44
 `\pdfstringdefDisableCommands`
 dropped. 66
 Reorganise warnings about `:' in
 captions, according to
 enhancements in `caption.sty v3.5a`. 52
 `\bsc`: `\bsc` now relies on
 `\texorpdfstring` to be safe in
 bookmarks. 44

- `\captionsfrench`: Small caps
 removed in `\figurename` and
 `\tablename`, use `\fnum@figure`
 and `\fnum@table` instead. 48

- `\FB@fg`: `\FB@og` and `\FB@fg` now rely
 on `\texorpdfstring` to be safe in
 bookmarks. 37

- `\frquote`: `\frquote` now relies on
 `\texorpdfstring` to be safe in
 bookmarks. 39

- `\fup`: `\up` and `\fup` now rely on
 `\texorpdfstring` to be safe in
 bookmarks. 41

- `\no`: `\no`, `\nos`, `\No`, `\Nos`, `\primo`,
 `\fprimo`, now rely on
 `\texorpdfstring` to be safe in
 bookmarks. 43

v3.5j

- General: For `memoir`, `koma-script` and
 `beamer` captions, `\FB@std@sep`
 has to be defined before activating
 the colon. 33

v3.5i

- `\FBprocess@options`: For `memoir`,
 `koma-script` and `beamer` classes,
 leave caption delimiter unchanged
 if it has been user customised. . 64

v3.5h

- `frenchb.lua`: Added glues and

penalties should inherit attributes from the related punctuation character; this is mandatory for Lua-UL to underline and highlight them. Thanks to Marcel Krüger for providing the fix.	24	Needed by \frquote.	74
Code reorganised for better efficiency.	24	\frquote: New command \FB@addquote@everypar to manage \everypar: \frquote failed when used immediately after a sectionning command.	38
v3.5g		v3.5a	
frenchb.lua: The kerning callback is a bit specific: adding code with add_to_callback actually deletes the legacy kerning as pointed out by Marcel Krüger on SE.	24	General: New optional layout for lists: lists' items can be typeset as paragraphs with indented labels while the default leaves the labels hanging into the left margin.	68
v3.5f		\descriptionFB: ListItemsAsPar option taken into account for description lists.	70
General: \l@canadien was defined too early in file 'canadien.ldf': \l@acadian might not be defined.	15	\frenchsetup: New option ListItemsAsPar for displaying lists' items "as paragraphs".	54
\selectlanguage{canadien} allowed again only for backward compatibility (deprecated).	77	v3.4d	
\DecimalMathComma: Fixed bug with the acadian language. Warning added if used with the icomma package.	45	\frenchsetup: New test for deciding about utf8 encoding for keys og and fg (the former one fails with LaTeX 2018 release).	60
v3.5e		v3.4c	
\frenchsetup: StandardLayout and GlobalLayoutFrench options can no longer be toggled when French is not the main language.	55	\iffBXeTeX: Reverting to former test, beware of \XeTeXrevision left as \relax by careless testing.	16
\frquote: Make resettings global on exit.	40	v3.4b	
new command \NoEveryParQuote.	40	\datefrench: Do not redefine \date as \frenchdate in French.	40
reset \FB@addGUILspace attribute inside \localleftbox (LuaTeX).	39	v3.4a	
v3.5d		General: \LdfInit checks \FBclean@on@exit instead of \captionsfrench (undefined in PLain). Prevents loading french.lfd again with acadian option.	14
\frenchsetup: ReduceListSpacing option depreciated: see StandardListSpacing.	54	babel-french now requires eTeX.	14
v3.5c		Lua function token.get_meaning requires LuaTeX 1.0.	21
General: Remove grouping inside @makefntext, \localleftbox and \FBeverypar@quote saved and restored instead.	74	New \FBgspchar to customise the space character to be used for \og and \fg with the UnicodeNoBreakSpaces option.	37
\frquote: \FBeverypar@quote's value now properly reset across level changes.	39	New attribute \FB@dialect for the French dialect acadian.	20
\noextrasfrench: \llccode of quote 0x27 changed from 0x2019 to 0x27 for Unicode engines.	16	New command \FBsetspace to fine tune spacing independently in French and in French dialects.	18
v3.5b		Shrink/stretch removed in \FBthousandsep.	48
General: Reset \FBeverypar@quote locally inside @makefntext.		Toks \FBcolonsp, \FBthinsp and \FBguillsp removed.	18

\datefrench: Specific code for Plain finally removed (babel bug reported).	40	\iflanguage test which is based on patterns.	16	
\extrasfrench: Change \(\{no\}extras\CurrentOption to \(\{no\}extrasfrench. \(\{no\}extrasacadian will be defined as \(\{no\}extrasfrench in file acadian.ldf.	16	v3.3a	General: Compatibility code for pre 2015/10/01 LaTeX release removed, see Itnews23.tex.	20
\frenchsetup: Patch for koma-script classes moved here, after \ifFBPartNameFull is defined, so that it applies to \extrasacadian too: \AtEndofPackage is too late.	55	Skip \FBguillskip for LaTeX replaced by toks \FBguillsp.	18	
frenchb.lua: Global 'FBsp' table added; local function 'get_glue' changed into global 'FBget_glue'.	23	\captionsfrench: Commands \frenchpartfirst, \frenchpartsecond and \frenchpartnameord added.	48	
v3.3d		\FBthinspace: Skips \FBcolonskip and \FBthinskip replaced by toks \FBcolonsp and \FBthinsp.	17	
frenchb.lua: In default mode, for ':' only, check if next node is a glyph or not. If it is, turn the 'auto' flag to false (avoids spurious spaces in URLs, MSDOS paths or 10:35).	25	\frenchsetup: \frenchbsetup is now an alias for \frenchsetup.	54	
v3.3c		Options INGuillSpace, ThinColonSpace no longer delayed AtBeginDocument.	54	
General: LaTeX 2017-04-15 defines TU encoding for Unicode engines, fontspec is no longer required.	66	\frquote: \FB@quotespace (kern), changed into \FB@guillspace.	39	
New command \FBthousandsep to customise numprint.	48	v3.2h	\@makefntextFB: With beamer.cls, add \llap to \@thefnmark for notes numbered over 99.	74
New configurable kerns \FBmedkern, and \FBthickkern suitable for HTML translation.	43	\bbl@frenchlistlayout: Execute \update@frenchlists only if GlobalLayoutFrench is false. Delete stuff for lists in \noextrasfrench.	71	
Reorganise warnings when the caption, subcaption or floatrow packages are loaded before babel/french.	52	\frenchsetup: Option GlobalLayoutFrench skipped when French is not the main language.	55	
Reset \localleftbox locally inside \@makefntext. Needed by \frquote with LaTeX.	74	v3.2g	General: Changed Unicode definition of \boi.	44
\frenchsetup: New option 'UnicodeNoBreakSpaces' for html translators (LuaLaTeX only).	59	fontspec defines TU encoding now and no longer loads xunicode.sty. Test changed.	66	
frenchb.lua: Function 'get_glue' robustified. 'french_punctuation' can insert Unicode characters instead of glues.	22	Issue a warning if beamerarticle.sty is loaded after babel.	53	
v3.3b		\frenchsetup: Minimal list customisation when beamerarticle.sty is loaded.	55	
General: Generate portmanteau files acadian.ldf, canadien.ldf, frenchb.ldf, and francais.ldf and warn about deprecated options.	76	Warn when wrong values are provided to options EveryParGuill or EveryLineGuill.	58	
New 'if' \ifFBfrench to replace		\frquote: Default options of \frquote are no longer engine-dependent.	38	
v3.2f		\DecimalMathComma: Fixed conflict with the icomma package.	45	

v3.2e	ones.	17
General: Add missing redefinitions for \leftmarginv, \leftmarginvi.	\NoAutoSpacing: \NoAutoSpacing	
Suggested by J.F. Burnol.	made robust.	36
\DecimalMathComma:	frenchb.lua: glue_spec removed;	
\DecimalMathComma didn't work with LuaTeX. Fixed now.	starting with LuaTeX 0.95, glue specifications fit in glue.	24
v3.2d	v3.2a	
\descriptionFB: Changed \listindentFB to \descindentFB which defaults to \listindentFB. \leftmargini reduced when \descindentFB is null.	@makefntextFB: beamer.cls requires a specific definition of @makefntextFB (pointed out by DB). The same is true for memoir and koma-script classes (done). .	73
v3.2c	\fg: \xspace moved from \FB@fg to \fg: \xspace messes up \frquote, pointed out by Sonia Labetoule. As a side effect \xspace is now active in \fg in and outside French.	38
General: New LuaTeX attribute \FB@spacing.	v3.1m	
Newif \ifFB@spacing and new commands \FB@spacingon, \FB@spacingoff to control space tuning in French.	frenchb.lua: new_glue_scaled returns nil in case of invalid font table (i.e. Icircle1.pfb). In such cases babel-french leaves the node list unchanged.	24
Switch \ifFB@spacing added to the four French shorthands.	v3.1l	
\FB@xetex@punct@french: Switch \ifFB@spacing added to all \XeTeXinterchartoks commands.	General: Add a variant of \babel@savevariable to save \XeTeXcharclass(es) in a loop. .	31
\FBthinspace: Change .16667em to .5\fontdimen2\font to get in XeTeX and pdfTeX the same spacing as in LuaTeX.	\FB@xetex@punct@french: Save and restore \XeTeXinterchartokenstate, \shorthandon, \shorthandoff using \babel@savevariable and \babel@save, \XeTeXcharclass(es) using \FB@savevariable@loop.	31
\frenchsetup: Add a warning about options og/fg for old XeTeX or LuaTeX engines requiring active characters.	frenchb.lua: font.getfont(fid) possibly returns nil even for a positive fid (i.e. AMS Icircle1.pfb). Reported by François Legendre. .	24
\NoAutoSpacing: New definition based on \FB@spacing@off common to all engines.	v3.1k	
\ttfamilyFB: New definitions of \ttfamilyFB and co, common to all engines, based on \FB@spacing@off and \FB@spacing@on.	General: (pdfTeX shorthands) test on \lastskip changed from 0pt to 1sp for active punctuation for consistency with XeTeX and LuaTeX.	33
v3.2b	\FB@xetex@punct@french: Thin glues (less than 1sp) should not trigger space insertion before high ponctuation. Add a check on \lastkip.	31
General: Load lluatex.tex for plain LuaTeX to ensure \newattribute is defined.	v3.1j	
Warning added when the subcaption package is loaded before babel/french.	General: Loading luatexbase.sty is no longer needed with LaTeX release	
\iffB@xetex@punct: New counter \FB@nonchar needed for non characters: its value will be 4095 for new engines and 255 for older		

2015/10/01 or later.	20	Node HLIST added; node TEMP added for the first node of \hboxes.	22
\frquote: \fr@quote completely rewritten: \leavevmode added and explicitly save/restore \everypar and \localleftbox instead of using a group in order to ensure compatibility with package wrapfig.	39	General: \FBCaption@Separator changed when option CustomiseFigTabCaptions is set to false.	52
\PackageWarning is undefined in Plain, use \fb@warning instead.	39	\FBprocess@options: Bug fix for the beamer class: figure and table captions are now consistent with babel-french's documentation. Pointed out by Denis Bitouzé.	64
v3.1i		Definition of \captionformat and \captiondelim changed when option CustomiseFigTabCaptions is set to false.	64
General: Remove restriction about loading numprint.sty after babel.	53	\FBthinspace: \FBthinspace is no longer a kern but a skip (babel-french adds a nobreak penalty before it).	17
\frquote: \luatexlocalleftbox changed to \localleftbox by new LaTeX release 2015/10/01.	39	v3.1e	
nombre: \nombre command changed when numprint.sty is not loaded: only one warning, no error.	48	\frenchsetup: Corrected typo: SmallCapsFigTabCaptions instead of SmallCapsFigTabCaptions. Pointed out by Céline Chevalier.	54
v3.1h		v3.1d	
General: french.cfg from e-french conflicts with babel-french. Do NOT load it (no need for .cfg files with babel-french anyway).	76	General: New section: issue warnings if packages listings, numprint and natbib are loaded too early or too late vs babel.	53
v3.1g		v3.1c	
General: Lua function french_punctuation is now inserted at the end of the 'kerning' callback (no priority) instead of 'hpack_filter' and 'pre_linebreak_filter'.	29	frenchb.lua: Previous bug fix for null glues (v3.0c) did not work properly. Fixed now (I hope!). Pointed out by Jacques André.	25
Use Babel defined loops \bbbl@for instead of \@for borrowed from file ltcntrl.dtx (\@for is undefined in Plain).	30	v3.1b	
\captionsfrench: \partname's definition depends now on flag PartNameFull. No need to redefine it in \frenchbsetup.	48	\captionsfrench: Change \scshape to customisable \FBfigtabshape for \figurename and \tablename.	48
\frenchsetup: Bug fix for koma-scripts classes: a spurious dot was added by the \partformat command.	55	\frenchsetup: New option SmallCapsFigTabCaptions.	54
PartNameFull now just sets the flag, nothing to add to \captionsfrench when false.	54	\ieres: Removed \lowercase from definitions of \ieme and co: \up already does the conversion.	43
frenchb.lua: Flag addgl set to false for ‘<’ at the end of an \hbox or a paragraph or when followed by a null glue (i.e. springs).	27	\no: Removed \lowercase from definitions of \FrenchEnumerate, ... \No and co: \up already does the conversion.	43
flag addgl set to false for ‘>’ at the beginning of an \hbox or a paragraph or a tabular ‘l’ and ‘c’ columns.	27	frenchb.lua: Add a check for null fid in french_punctuation (Tikz \nullfont). Bug pointed out by Paul Gaborit.	24

v3.1a	
General: fontspec is not required for T1 fonts used with the luainputenc.sty package.	66
Misplaced \fi for plain formats.	20
New command \frquote for imbedded or long French quotations.	38
\frenchsetup: Codes 0x13 and 0x14 added for French quotes in T1-encoding. Support for older versions of LuaTeX and XeTeX dropped.	60
New options InnerGuillSingle, EveryParGuill and EveryLineGuill to control \frquote.	54
frenchb.lua: Added flag addgl which must also be true when prev or next is not a char (i.e. \kern0 in «\texttt{a}»).	27
Codes 0x13 and 0x14 added for French quotes in T1-encoding.	22
Look ahead when next is a kern (i.e. in «\texttt{a}»).	27
v3.0c	
General: babel-french requires babel-3.9i.	14
Just load luatexbase.sty instead of luatfontload.sty with plain formats.	20
No need to define \l@french as \lang@french, babel.def (3.9j) takes care for this.	15
\frenchsetup: New option INGuillSpace.	54
No list customisation when beamer class is loaded.	55
frenchb.lua: Null glues should not trigger space insertion before high punctuation. Bug pointed out by Benoit Rivet for the 'lstlisting' environment of the listings package.	25
v3.0b	
General: frenchb.lua was not found by Lua function dofile (not kpathsea aware). Call function kpse.find_file first, as suggested by Paul Gaborit.	29
Require luatexbase with LaTeX2e in case fontspec has not been loaded before babel.	20
v3.0a	
General: \bbl@nonfrenchguillemets deleted, use \babel@save instead.	38
\LdfInit checks \captionsfrench instead of \datefrench to avoid a conflict with papertex.cls which loads datetime.sty.	14
french.cfg will be loaded (if found) instead of frenchb.cfg. NO NEED for .cfg files in French anyway.	76
In Plain, provide a substitute for \PackageWarning and \PackageInfo.	14
Merging of \captionsfrenchb, \captionsfrancais with \captionsfrench deleted in favor of new babel 3.9 syntax.	50
More informative, less TeXnical warning about \@makecaption.	52
New flag \iffB@luatex@punct for 'high punctuation' management with LuaTeX engines.	17
New handling of 'high punctuation' through callbacks with LuaTeX engines.	20
No warning about \@makecaption for SMF classes.	51
Options processing completely reorganised, now \babel@save and \babel@savevariable are usable for French.	54
Support for options frenchb, francais, canadien, acadian changed.	14
Test \ifXeTeX changed to \ifFBunicode and 'xltextra' changed to 'fontspec'.	66
\CaptionSeparator: Remove \FBCaption@Separator0RI, use \babel@save instead.	50
\captionsfrench: Take advantage of babel's \SetString commands for captionnames.	48
\datefrench: Take advantage of babel's \SetString commands for \datefrench. Doesn't work with Plain (yet?).	40
\descriptionFB: Added \listindentFB to \itemindent. Suggested by Denis Bitouzé.	70
\extrasfrench: Take advantage of babel's \babel@savevariable to handle apostrophe's \lccode.	16
\FB@fg: Definitions of \FB@og and \FB@fg now depend on punctuation handling (LuaTeX / XeTeX / active).	37
\FBprocess@options: With	

koma-script and memoir class, customise \captionformat and \captiondelim.	64	\frenchsetup: New options OldFigTabCaptions and CustomiseFigTabCaptions.	54
---	----	--	----
